CipherLab
User Guide

1500/1502 Series Barcode Scanner

Setup barcodes included.

Version 1.27

CIPHERLAB

IMPORTANT NOTICES

FOR USA

This equipment has been tested and found to comply with the limits for a **Class B** digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

▶ Reorient or relocate the receiving antenna.

▶ Increase the separation between the equipment and receiver.

▶ Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

▶ Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FOR CANADA

This digital apparatus does not exceed the Class B limits for radio noise emissions from digital apparatus as set out in the interference-causing equipment standard entitled "Digital Apparatus," ICES-003 of Industry Canada.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Cet appareil numerique respecte les limites de bruits radioelectriques applicables aux appareils numeriques de Classe B prescrites dans la norme sur le material brouilleur: "Appareils Numeriques," NMB-003 edictee par l'Industrie.

FOR PRODUCT WITH LASER

CAUTION

This laser component emits FDA / IEC Class 2 laser light at the exit port. Do not stare into beam.

SAFETY PRECAUTIONS

▶ DO NOT expose the scanner to any flammable sources.

▶ Under no circumstances, internal components are self-serviceable.

▶ For AC power adaptor, a socket outlet shall be installed near the equipment and shall be easily accessible. Make sure there is stable power supply for the scanner or its peripherals to operate properly.

CARE & MAINTENANCE

▶ Use a clean cloth to wipe dust off the scanning window and the body of the scanner. DO NOT use/mix any bleach or cleaner.

▶ Pack the scanner for storage when not using it for a long time.

▶ Keep the scanner away from any magnets and magnetic fields to prevent the laser engine from malfunction.

▶ If you shall find the scanner malfunctioning, write down the specific scenario and consult your local sales representative.

RELEASE NOTES

Version	Date	Notes
1.27	Feb. 19, 2019	▸ Modified: **2.7 Direct USB OPOS** - setting barcode added
		▸ Modified: **3.8.1 Code 128 Security Level** – Ultra High added
1.26	Oct. 12, 2018	▸ Modified: **1.14 Cable Auto-Detection (1500P only)** – 9600 baud rate set by default for RS-232
		▸ Modified: **Ch. 2** – 9600 baud rate set by default for RS-232 cable auto-detection
		▸ Modified: **2.1.1 Activate Keyboard Wedge & Select Keyboard Type** - Greek(35), Slovenian (45), Mexican Spanish (46) added
		▸ New: **2.1.5 Special Keyboard Feature** - "Bypass with Control Character Output for Windows" setting barcode added
		▸ Modified: **2.4.1 Activate USB HID & Select Keyboard Type** - Greek(81), Slovenian(91), Mexican Spanish (92) added
		▸ Modified: **2.4 Direct USB HID** – Alternate Composing added
		▸ New: **2.4.7 USB Polling Interval**
		▸ New: **2.7 Direct USB OPOS**
		▸ Modified: change section article to **4.2.1 Single Character Substitution** (previous article: **Select a Set for Character Substitution**)
		▸ New: **4.2.2 Multiple Characters Substitution**
		▸ Modified: **Appendix V** - **Keyboard Wedge**: Greek, Slovenian, Mexican Spanish added
		▸ Modified: **Appendix V** - **Direct USB HID**: Greek, Slovenian, Mexican Spanish added
1.25	Oct. 16, 2017	▸ Modified: **Ch. 3** – disable/enable all symbologies setting barcodes added
		▸ Modified: **3.17.8 Security Level** (GS1 DataBar, default set to Normal)
		▸ New: **Appendix V Keyboard Type One-Scan Barcode**

1.24	Jul. 17, 2017	▶ Modified: **Symbology Supported** – Code 11, Trioptic Code 39 added
		▶ Modified: **Chapter 2** – Pin assignment & drawing of Keyboard Wedge, RS232, and USB cables added
		▶ New: **3.2.5/3.3.5/3.4.5** – Code 25 Security Level (1500P only)
		▶ Modified: **3.5.5** – set "Normal" (Code 39 security level) to default
		▶ New: **3.6 Trioptic Code 39**
		▶ Modified: **3.8.1** – set "Normal" (Code 128 security level) to default
		▶ Modified: **3.10.4** – set "Normal" (EAN-13 security level) to default
		▶ New: **3.17.8 Security Level** (GS1 DataBar)
		▶ New: **3.21 Code 11** (transmit/not transmit barcodes exchanged)
		▶ Modified: **4.2.2 Symbologies for Character Substitution (All 3 Sets)** – Code 11, Trioptic Code 39 (1500P only) added
		▶ Modified: **4.4.1 Select Pre-defined Code ID** – Apply AIM Code ID (1500P only) added
		▶ Modified: **4.4.2 Change Code ID** – Code 11, Trioptic Code 39 (1500P only) added
		▶ Modified: **4.5 Length Code** – Code 11, Trioptic Code 39 (1500P only) added
		▶ Modified: **5.3.1 Applicable Code Type** – Code 11, Trioptic Code 39 (1500P only) added
1.23	Apr. 17, 2017	▶ Modified: **2.4** – Kanji Transmission removed
		▶ Modified: **3.9.5** – EAN-13 979 & 491 Addon Mode setting barcodes added
		▶ Modified: **3.9.6 EAN-13 Addon Mode Buzzer** removed (included in 3.9.5)
1.22	Dec. 10, 2015	▶ New: **1.11.1 Behavior of 1500**
		▶ New: **1.11.2 Behavior of 1500P**
		▶ New: **1.11.3 Ambient Light**
		▶ Modified: **Appendix I** – add the Through USB Virtual COM Interface (1500P Only) section
1.21	Nov. 26, 2015	▶ New: **3.5.6 Asterisks as Data Characters**
1.20	Aug. 13, 2015	▶ Modified: descriptions relating to 'CD-ROM' removed
		▶ Modified: **1.5 Send "NR" to Host** – 1500P added
		▶ New: **1.14 Cable Auto-Detection**
		▶ New: **2.4 Direct USB HID**
		▶ New: **2.5 Direct USB VCOM**
		▶ New: **2.6 Direct USB VCOM_CDC**
		▶ Modified: **Specifications** – 1500P added
1.18	Sep. 15, 2014	▶ New: **3.9.5 EAN-13 Addon Mode**
		▶ New: **3.9.6 EAN-13 Addon Mode Buzzer**

1.17	Mar. 18, 2014	▶ Modified: **Care & Maintenance** – "Keep the scanner away from any magnets and magnetic fields to prevent the laser engine from malfunctioning." Added
		▶ Modified: **3.8.3** – GTIN-13 format barcodes added
		▶ Modified: **3.10.3** – GS1 formatting barcodes added
		▶ Modified: **3.10.4** – Application ID Mark barcodes added
		▶ Modified: **3.11.1** – ISBT Concatenation barcodes added
		▶ Modified: **3.16.5** – Field Separator barcode added
		▶ Modified: **3.16.6** – GS1 Formatting barcodes added
		▶ Modified: **3.16.7** – Application ID Mark barcodes added
1.16	Dec. 18, 2012	▶ Modification: **2.1.1** Keyboard type added with No. 32 PCAT (Swiss) & No. 33 PCAT (Danish)
		▶ New: **2.3.6 Output Format** (Wand Emulation) setup barcodes added
		▶ New: **3.1 Codabar** added w/ security Level (High: 100490/Normal: 100491)
		▶ New: **3.7 Code 128** added w/ security Level (High: 100492/Normal: 100493)
1.15	Mar 02, 2012	▶ New: Quick Start — One-Scan Setup Barcodes
		▶ Modified: 2.1.1 Activate Keyboard Wedge & Select Keyboard Type — add #31 PCAT (Hungarian)
		▶ Modified: 3.10 GS1-128 (EAN-128) enabled by default
		▶ New: 3.5.5 Security Level (for Code 39)
		▶ Modified: 4.6.1 Edit a Concatenation of Barcodes — Code type for ISBT 128 added
		▶ Modified: 5.5 Configuring Format — Define Transmission Sequence (add Null Character Field)
1.14	Jul. 19, 2011	▶ Modified: 3.10 GS1-128 (EAN-128) — Cannot read when disabled since firmware v1.10
		▶ Modified: Specifications — Power Adaptor
1.13	Nov. 23, 2010	▶ Modified: 1.11 Auto-Sense Mode (1500 Only) — add High Sensitivity behavior
1.12	Sep. 27, 2010	▶ Modified: Introduction, Symbologies Supported — add support of more RSS symbologies
		▶ Modified: 3.16 GS1 DataBar (RSS Family)
		▶ Modified: 3.16.2 GS1 DataBar Omnidirectional (RSS-14)
		▶ Modified: 3.16.3 GS1 DataBar Expanded (RSS Expanded)
		▶ Modified: 4.2 Character Substitution — add table for Scan Code/Normal Key
		▶ New: 5.4.5 Pause Field Setting
		▶ Modified: 5.5 Configuring Format — Define Transmission Sequence (add Pause Field)
		▶ Specifications: add 1502
1.11	Apr. 14, 2010	▶ Modified: 2.1.1 Activate Keyboard Wedge & Select Keyboard Type — add Turkish
		▶ Modified: 3.9.4 Security Level

1.10	Apr. 09, 2010	▶ New: Introduction — add 1500WA
		▶ Modified: Appendix III Keyboard Wedge Table — remove settings for user-defined scan code
		▶ Modified: Appendix III Keyboard Wedge Table — provide examples
1.09	Nov. 25, 2009	▶ Modified: 2.2.2 Baud Rate — change setup barcode for 4800 bps (change 100079 to 100100)
1.08	Oct. 30, 2009	▶ Modified: 1.10 Auto-Sense Mode (1500 Only) — Continuous mode as an alternative
		▶ Modified: 1.12 Symbologies Supported — ISBT 128 enabled by default
		▶ Modified: 2.2.2 Baud Rate — add setup barcode for 4800 bps
		▶ Modified: 4.2.2 Symbologies for Character Substitution (All 3 Sets) — add ISBT 128
		▶ Modified: 4.4.1 Select Pre-defined Code ID — add ISBT 128
		▶ Modified: 4.4.2 Change Code ID — add ISBT 128
		▶ Modified: 4.5 Length Code — add ISBT 128
		▶ Modified: 5.3.1 Applicable Code Type (for Editing Format) — add ISBT 128
1.07	June 03, 2009	▶ Modified: 1.3 LED Indicator — Power on LED (1 s)
		▶ Modified: 1.4 Beeper — More barcodes required for Multi-Barcode Editor
		▶ Modified: 3.12.3 Code Length Qualification — MSI must include checksum
		▶ Modified: 4.6.2 Activate the Concatenation of Barcodes — add description of LED and beeper
		▶ Modified: 4.7 Removal of Special Character
		▶ Modified: Appendix I Firmware Upgrade
		▶ Modified: Appendix II Host Serial Commands
1.06	Mar. 02, 2009	▶ Modified: 3.10 GS1-128 (EAN-128)
		▶ Modified: 3.16 GS1 DataBar (RSS Family)
		▶ Modified: 3.16.2 GS1 DataBar Omnidirectional (RSS-14)
		▶ Modified: 3.16.3 GS1 DataBar Expanded (RSS Expanded)
		▶ Modified: 3.16.4 GS1 DataBar Limited (RSS Limited)
1.05	Feb. 11, 2009	▶ Modified: 1.6 Scan Modes — add Alternate Mode to table
		▶ New: 1.6.8 Alternate Mode — add setup barcode (100203)
		▶ Modified: 1.8 Delay between Re-read — add Alternate Mode
1.04	Dec. 12, 2008	▶ Modified: 4.6 Multi-Barcode Editor — 4-digit length excludes prefix, suffix, length code, etc.
		▶ Modified: 5.2.3 Define Data Criteria — Data length includes prefix, suffix, length code, etc.
1.03	Nov. 24, 2008	▶ New: Quick Start — Flowchart
		▶ New: 1.3.2 Good Read LED Duration
		▶ Modified: 4.6 Multi-Barcode Editor — Reset scan mode to "Laser"
		▶ Modified: Host Serial Commands — adds D, E commands
1.02	Sep. 11, 2008	▶ Modified: section 1.10 Auto-Sense Mode — add setup barcodes for improving sensitivity

1.01	July 23, 2008	▶ Modified: section 1.2 Transmit Buffer — the use of transmit buffer is different from memory mode, and the latter is not supported by 1500 scanner!
1.00	May 26, 2008	Initial release

CONTENTS

INTRODUCTION

CipherLab's small-form-factor 1500 Series Barcode Scanners are specifically designed to answer your mobile demands. The tethered handheld scanners are designed to help accelerate productivity while lowering the total cost of ownership. Intensive data collection jobs are made easier with fast, accurate barcode scanning in various working environments, especially in small businesses. A new ordering option is provided for adapting a wide angle CCD scan engine to read long barcodes.

Owing to the slim, ergonomic design, extremely low power consumption, and powerful decoding capability, CipherLab Barcode Scanners are the best choice for the following applications –

▶ Receiving in Retail
▶ Product labeling & Tracking
▶ Shelf Product Replenishment
▶ Mobile Point of Sale (POS)
▶ Mobile Inventory Management
▶ Order Picking & Staging
▶ Work-In-Process Tracking
▶ Material Flow Control
▶ Transportation & Distribution
▶ Warehousing
▶ Asset Management

This manual contains information on operating the scanner and using its features. We recommend you to keep one copy of the manual at hand for quick reference or maintenance purposes. To avoid any improper disposal or operation, please read the manual thoroughly before use.

Thank you for choosing CipherLab products!

Update

INSIDE THE PACKAGE

The items included in the package may be different, depending on your order. Rich choices of output interfaces are available for you to enhance the total performance of the scanner. Refer to product specifications.

Save the box and packaging material for future use in case you need to store or ship the scanner.

▸ Barcode Scanner: 1500, 1500P, 1500WA, or 1502

Note: (1) For model designation, please see the label on the scanner.

PRODUCT HIGHLIGHTS

▸ Small-form-factor and built tough to survive drop test
▸ Extremely low power consumption
▸ Firmware upgradeable
▸ Supports most popular barcode symbologies, including GS1-128 (EAN-128), GS1 DataBar (RSS), etc.
▸ Supports wide angle scan engine for long barcodes
▸ Supports negative barcodes
▸ Supports different scan modes, including Aiming Mode and Multi-Barcode Mode
▸ Programmable feedback via LED indicator and beeper
▸ Beeping tone and duration programmable for Good Read
▸ Provides choices of output interfaces, including RS-232, Keyboard Wedge, and Wand Emulation.
▸ Programmable parameters include data output format, editing format, symbologies, etc.

Enter Setup

SYMBOLOGIES SUPPORTED

Most of the popular barcode symbologies are supported, as listed below. Each can be individually enabled or disabled. The scanner will automatically discriminate and recognize all the symbologies that are enabled. Refer to Chapter 3 Changing Symbology Settings for details of each symbology.

Symbologies Supported: Enable/Disable		Default	
Codabar		Enabled	
Code 93		Enabled	
MSI			Disabled
Plessey			Disabled
Telepen			Disabled
Code 128	Code 128	Enabled	
	GS1-128 (EAN-128)	Enabled	
	ISBT 128	Enabled	

Note: Starting from firmware version 1.10, ISBT 128 is enabled by default.

Code 2 of 5	Industrial 25	Enabled	
	Interleaved 25	Enabled	
	Matrix 25		Disabled
Code 3 of 9	Code 39	Enabled	
	Italian Pharmacode		Disabled
	French Pharmacode		Disabled
	Trioptic Code 39 (1500P only)		Disabled
EAN/UPC	EAN-8	Enabled	
	EAN-8 Addon 2		Disabled
	EAN-8 Addon 5		Disabled
	EAN-13	Enabled	
	EAN-13 & UPC-A Addon 2		Disabled
	EAN-13 & UPC-A Addon 5		Disabled
	ISBN		Disabled
	UPC-E0	Enabled	
	UPC-E1		Disabled
	UPC-E Addon 2		Disabled
	UPC-E Addon 5		Disabled
	UPC-A	Enabled	

Update

GS1 DataBar (RSS)	GS1 DataBar Omnidirectional (RSS-14)		Disabled
	GS1 DataBar Truncated		Disabled
	GS1 DataBar Stacked		Disabled
	GS1 DataBar Stacked Omnidirectional		Disabled
	GS1 DataBar Limited (RSS Limited)		Disabled
	GS1 DataBar Expanded (RSS Expanded)		Disabled
	GS1 DataBar Expanded Stacked		Disabled
Code 11	(1500P only)		Disabled

Enter Setup

QUICK START

The configuration of the scanner can be done by reading the setup barcodes contained in this manual or via the *ScanMaster* software.

This section describes the procedure of configuring the scanner by reading the setup barcodes and provides some examples for demonstration.

Note: If RS-232 is selected for output interface, the host can directly send serial commands to configure the scanner.
For example, run HyperTerminal.exe and type the 6-digit command located under each setup barcode. Refer to Appendix II Host Serial Commands.

Update
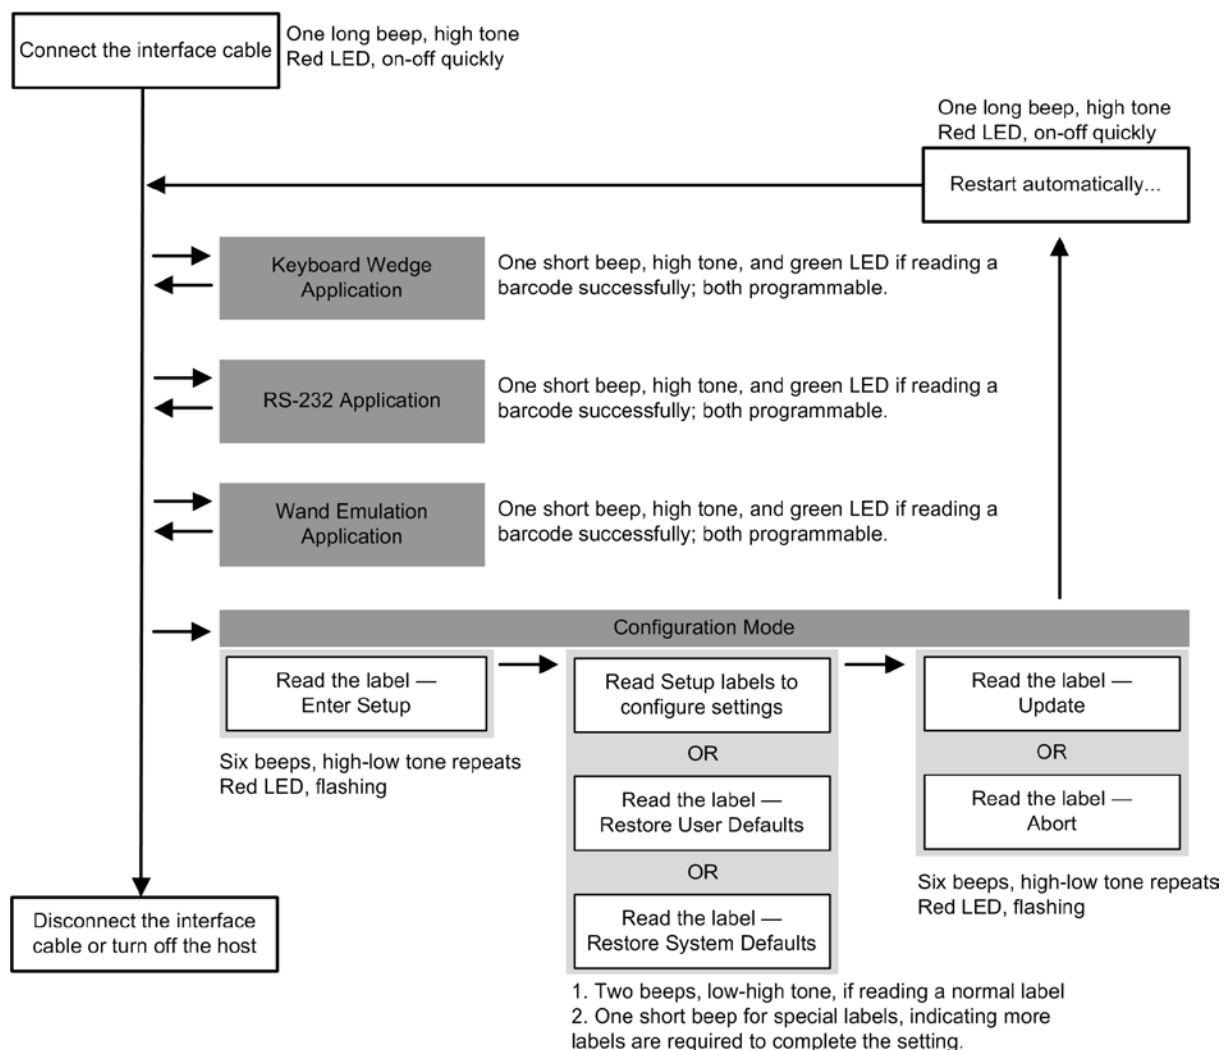

ENTER CONFIGURATION MODE

For the scanner to enter the configuration mode, you must have it read the "Enter Setup" barcode, which can be located at the bottom of almost every even page of this manual.

▶ The scanner will respond with six beeps and its LED indicator will become flashing red after reading the barcode.

Enter Setup

For configuring scanner parameters, see "Read a Setup Barcode" below.

EXIT CONFIGURATION MODE

For the scanner to save settings and exit the configuration mode, you must have it read the "Update" barcode, which can be located at the bottom of almost every odd page of this manual. If you want to exit the configuration mode without saving any changes, have the scanner read the "Abort" barcode instead.

▶ Just like reading the "Enter Setup" barcode, the scanner will respond with six beeps and its LED indicator will become flashing red after reading the barcode. Wait for a few seconds for the scanner to restart itself.

Update
109999

Abort
109998

Enter Setup

DEFAULT SETTINGS

SAVE USER SETTINGS AS DEFAULTS

For the scanner to keep the customized settings as user defaults, you must have it read the "Save as User Defaults" barcode. This is a normal setup barcode, and the scanner will respond with two beeps (low-high tone).

▶ After reading the "Update" barcode, the current settings will be saved as user defaults.

Save as User Defaults

||||| ||| || ||||||| || ||||| |||
109986

RESTORE USER DEFAULTS

For the scanner to restore the user defaults, which you have saved earlier, you must have it read the "Restore User Defaults" barcode. This is a normal setup barcode, and the scanner will respond with two beeps (low-high tone).

▶ After reading the "Update" barcode, all the parameters of the scanner will return to their customized values.

Restore User Defaults

||||| ||| || ||||||| || ||||| |||
109987

RESTORE SYSTEM DEFAULTS

For the scanner to restore the factory defaults, you must have it read the "Restore System Defaults" barcode. This is a normal setup barcode, and the scanner will respond with two beeps (low-high tone).

▶ After reading the "Update" barcode, all the parameters of the scanner will return to their default values.

Restore System Defaults

||||| ||| || ||||||| || ||||| |||
109993

Note: The system default value (if there is) for each setting is indicated by an asterisk "*".

||||| ||| || ||||||| || ||||| |||
Update

READ A SETUP BARCODE

CONFIGURE PARAMETERS

For most of the scanner parameters, only one read is required to set them to new values. The scanner will respond with two beeps (low-high tone) when each parameter is set successfully.
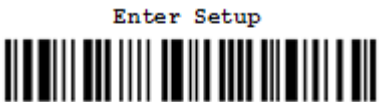

But for a number of special parameters, multiple reads are required to complete the setting. In this case, the scanner will respond with a short beep to indicate it needs to read more setup barcodes. These special parameters may require reading one or more setup barcodes, such as

▸ Numeric barcodes, say, for keyboard type, inter-character delay, length qualification

▸ Hexadecimal barcodes, say, for character strings as prefix, suffix, etc.

▸ When "Keyboard Wedge" is configured for interface, Key Type and Key Status will then become applicable. You may decide whether or not to change key status when "Normal Key" is selected for Key Type.

To complete the configuration of these special parameters, it requires reading the "Validate" barcode, and the scanner will respond with two beeps (low-high tone) to indicate the input values are validated.

Enter Setup
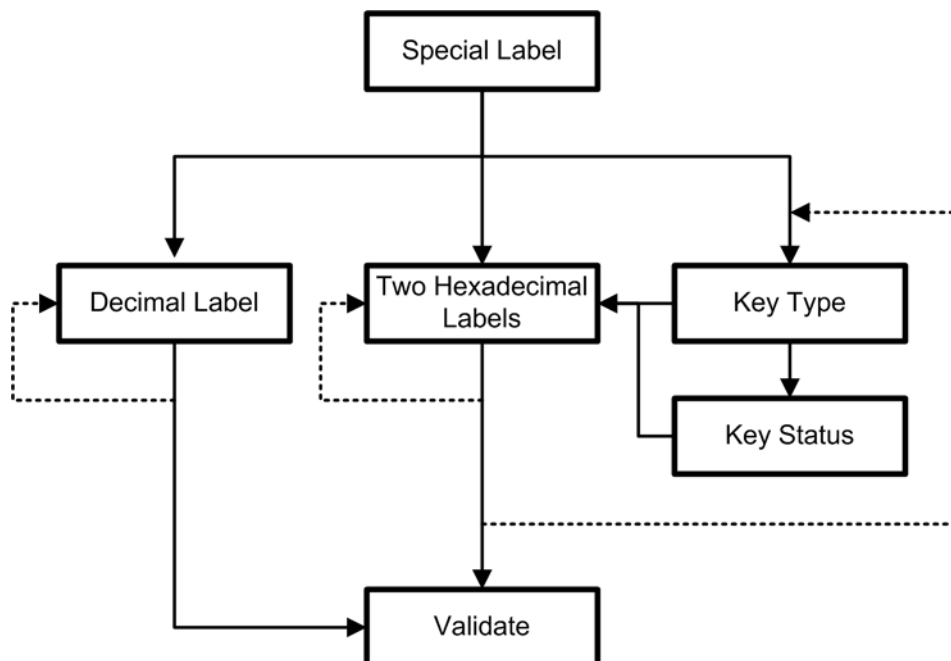

The example below shows how to save your settings as "User Default" so that you may restore user defaults at a later time:

Steps	Action	Feedback if Successful
1	Power on the scanner...	The scanner will respond with a long beep (high tone) and its LED indicator will become solid red and go off quickly.
2	Enter the Configuration Mode...	The scanner will respond with six beeps (high-low tone repeats three times), and its LED indicator will be flashing red.

Enter Setup

3	Read a Setup barcode... For example,	The scanner will respond with two beeps (low-high tone) if reading a normal setup barcode.

*Enable Industrial 25

100307

Save as User Default

109986

| 4 | Exit the Configuration Mode... | Same as for *Enter the Configuration Mode*. |

Update 109999 OR **Abort** 109998

| 5 | The scanner will automatically restart itself... | Same as for *Power on the scanner*. |
| * | When any configuration error occurs... | The scanner will respond with one long beep (low tone). |

Update
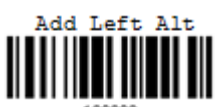

The example below shows how to set numeric parameters:

Steps	Action	Feedback if Successful
1	Power on the scanner…	The scanner will respond with a long beep (high tone) and its LED indicator will become solid red and go off quickly.
2	Enter the Configuration Mode…	The scanner will respond with six beeps (high-low tone repeats three times), and its LED indicator will become flashing red.

Enter Setup

3	Read a Setup barcode…	The scanner will respond with two beeps (low-high tone) if reading a normal setup barcode.
	For example,	

Normal setup barcode

*Enable Interleaved 25

100309

Normal setup barcode

Enable Fixed Length(s) …

100604

Special setup barcode

Max. Length (*126)
Or Fixed Length 1

100606

The scanner will respond with one short beep if reading a special setup barcode such as "Max. Length", indicating the setup requires reading more barcodes.

Decimal barcodes

1

109901

Read the "Decimal Value" barcode(s).

▶ Refer to Appendix IV "Decimal System"

5

109905

Validate

109994

The scanner will respond with two beeps (low-high tone) when the input values are validated.

4	Exit the Configuration Mode…	Same as for *Enter the Configuration Mode.*

Update

109999   OR   Abort

109998

5	The scanner will automatically restart itself…	Same as for *Power on the scanner*.

Enter Setup

The example below shows how to set string parameters:

Steps	Action	Feedback if Successful
1	Power on the scanner…	The scanner will respond with a long beep (high tone) and its LED indicator will become solid red and go off quickly.
2	Enter the Configuration Mode…	The scanner will respond with six beeps (high-low tone repeats three times), and its LED indicator will become flashing red.

Enter Setup

| 3 | Read a Setup barcode… | The scanner will respond with one short beep if reading a special setup barcode such as "Prefix Code", indicating the setup requires reading more barcodes. |
| | For example, | |

Configure Prefix
101230

Special setup barcodes

*Normal
109926

When "Keyboard Wedge" is configured for interface, Key Type and Key Status will then become applicable. You may decide whether or not to change key status when "Normal Key" is selected for Key Type.

▸ Refer to Appendix III

Add Left Alt
109932

2
109902

Hexadecimal barcodes

Read the "Hexadecimal Value" barcodes for the desired character string. For example, read "2" and "B" for the scanner to prefix the character "+".

▸ Refer to Appendix IV "Hexadecimal System"

B
109911

Validate
109994

The scanner will respond with two beeps (low-high tone) when the input values are validated.

| 4 | Exit the Configuration Mode… | Same as for *Enter the Configuration Mode*. |

Update
109999   OR   **Abort**
109998

| 5 | The scanner will automatically restart itself… | Same as for *Power on the scanner*. |

Update

LIST THE CURRENT SETTINGS

The current settings of all scanner parameters can be sent, via Keyboard Wedge or RS-232, to the host computer for user inspection. The listing includes pages as shown below. You can select the page of interest by having the scanner read the "List Page x" barcode. The scanner will respond with two beeps (low-high tone) and send the selected page to the host immediately.

Update

ONE-SCAN SETUP BARCODES

The one-scan setup barcode is convenient for users to complete configuration by just one scanning.

To create a "One-scan Setup Barcode":

▶ prefixing the setting parameter with "#@" characters
▶ suffixing the setting parameter with the "#"character

For example, the scanner needs to read three setup barcodes in sequence for the command parameter 109952 to take effect:

Enter Setup

List Page 3

109952

Update

109999
With the one-scan setup barcode #@109952#, setting is done with one scan.

One-Scan Setup Barcode for 109952

#@109952#

Note: If the scanner reads a once-scan setup barcode for changing the interface, it automatically restarts and responds with a long beep, and the LED becomes solid red and goes off.

Enter Setup

UNDERSTANDING THE BARCODE SCANNER

This chapter explains the features and usage of the barcode scanner.

IN THIS CHAPTER

1.1 POWER-ON

Connect the interface cable between the scanner and your computer.

▶ If using the RS-232 cable, you must join the power supply cord to power up the scanner.

▶ The scanner will respond with one long beep (high tone) and its LED indicator will become solid red and go off quickly.

1.2 TRANSMIT BUFFER

The scanner is designed to send any collected data to a host computer one by one via the transmit buffer (SRAM). Upon reading a barcode successfully, the scanner responds with one short beep (high tone) and its LED indicator becomes solid green and goes off quickly. However, the host computer may not receive the data immediately if using a low baud rate or waiting for handshake signal (flow control). With the transmit buffer, the scanner can ignore the transmission status and keep on reading barcodes until the buffer is full. When the transmit buffer is full, the scanner will respond with one long beep (low tone) and its LED indicator will become solid red and go off quickly.

Note: The 4 KB transmit buffer on the scanner can hold as many as 256 scans based on EAN-13 barcodes (equipped with 10 KB transmit buffer, 1500P can hold approximately 640 scans). Data will be cleared out once the power adaptor to the RS-232 cable is removed or other interface cable is disconnected!

Update

1.3 LED INDICATOR

The dual-color LED on top of the scanner is used to provide a feedback to users about the behavior of the scanner. For example, the LED becomes solid red and goes off quickly upon powering on or running out of transmit buffer. You may tell the difference by the beeps – for example, you will hear a long beep of high tone when powering on the scanner, and a long beep of low tone when the transmit buffer becomes full.

Scanner LED		Meaning
Red, on-off	---	▶ Power on, with one long beep (high tone, LED on for 1 second) ▶ Transmit buffer full, with one long beep (low tone) ▶ RS-232 connection fails, with two beeps (high-low tone)
---	Green, on-off	Good Read, with one short beep (high tone) and beeper pitch and duration programmable
Red, flashing	---	Configuration Mode (On/Off ratio 0.5 s: 0.5 s)

1.3.1 GOOD READ LED

*Enable Good Read LED

101014

Disable Good Read LED

101013

1.3.2 GOOD READ LED DURATION

By default, the Good Read LED stays on for 40 milliseconds. Specify a value, ranging from 1 to 254 in units of 10 milliseconds.

Good Read LED Time-out after 0.01~2.54 sec. (*40 ms)

101020

1) Read the barcode above to specify the time interval before the Good Read LED goes off.

2) Read the "Decimal Value" barcode on page 183. For example, read "1" and "5" for the Good Read LED to go off after 150 milliseconds.

3) Read the "Validate" barcode on the same page to complete this setting.

Enter Setup

1.4 BEEPER

The scanner has a buzzer to provide a feedback to users in various operating conditions.

Beeping	Meaning
One long beep, high tone	Power on, with red LED on (1 second) and off quickly
One short beep, high tone ▸ Programmable, default to 4 KHz	Good Read, with green LED on-off quickly
Six short beeps ▸ High-low tone repeats three times	▸ Enter Configuration Mode, with red LED flashing ▸ Exit Configuration Mode
Two beeps, low-high tone	Setup barcode read successfully
Two beeps, high-low tone	RS-232 connection fails (data saved in Transmit Buffer), with red LED on-off quickly
One short beep, high tone	More setup barcode required
One short beep, low tone	More barcodes required to complete the "output sequence" requirements of Multi-Barcode Editor, with green LED on-off quickly (Upon completion, same as Good Read.)
One long beep, low tone	▸ Transmit buffer full, with red LED on-off quickly ▸ Configuration error (Wrong barcode…)
Two long beeps, high-low tone	Multi-Barcode Mode – Buffer full

Update

1.6 SCAN MODES

Different scan modes are supported – select the scan mode that best suits the requirements of a specific application. Refer to the comparison table below.

Scan Mode	Start to Scan				Stop Scanning			
	Always	Press trigger once	Hold trigger	Press trigger twice	Release trigger	Press trigger once	Barcode being read	Timeout
Continuous mode	✓							
Test mode	✓							
Laser mode			✓		✓		✓	✓
Auto Off mode		✓					✓	✓
Auto Power Off mode		✓						✓
Alternate mode		✓				✓		
Aiming mode				✓			✓	✓
Multi-Barcode mode			✓		✓			

Note: By default, the scan mode is set to Laser mode.

Enter Setup

1.6.1 CONTINUOUS MODE

The scanner is always scanning.

▶ After a successful decoding, the removal of barcode is required. It is not allowed to proceed to decode until the decoding delay time has passed.

▶ To decode the same barcode repeatedly, move away the barcode and put it back again and again for scanning.

Note: Refer to "Delay between Re-read".

Continuous Mode

||||||||||||||||||||||
100201

Decoding Delay

Set the time interval between each decoding.

*Disable

||||||||||||||||||||||
100227

0.5 sec

||||||||||||||||||||||
100228

1 sec

||||||||||||||||||||||
100229

2 sec

||||||||||||||||||||||
100230

1.6.2 TEST MODE

The scanner is always scanning.

▶ Capable of decoding the same barcode repeatedly without removing it, for testing purpose.

Test Mode

||||||||||||||||||||||
100207

|||||||||||||||||||||| Update

1.6.3 LASER MODE

The scanner will start scanning once the trigger is held down.

▶ The scanning won't stop until (1) a barcode is decoded, (2) the pre-set timeout expires, or (3) you release the trigger.

Note: Refer to "Scanning Timeout".

*Laser Mode

```
100206
```

1.6.4 AUTO OFF MODE

The scanner will start scanning once the trigger is pressed.

▶ The scanning won't stop until (1) a barcode is decoded, and (2) the pre-set timeout expires.

Note: Refer to "Scanning Timeout".

Auto Off Mode

```
100200
```

1.6.5 AUTO POWER OFF MODE

The scanner will start scanning once the trigger is pressed.

▶ The scanning won't stop until the pre-set timeout expires, and, the pre-set timeout period re-counts after each successful decoding.

Note: Refer to "Delay between Re-read" and "Scanning Timeout".

Auto Power Off Mode

```
100202
```

Enter Setup

1.6.6 ALTERNATE MODE

The scanner will start scanning once the trigger is pressed

▶ The scanning won't stop until you press the trigger again.

Alternate Mode

100203

1.6.7 AIMING MODE

The scanner will aim at a barcode once the trigger is pressed, and start scanning when the trigger is pressed again within one second.

▶ The scanning won't stop until (1) a barcode is decoded, and (2) the pre-set timeout expires.

Aiming Mode

100208

Aiming Timeout

You can limit the aiming time interval (1~15). By default, the scanner time-out is set to 1 second.

**Aiming Time-out
after 1~15 sec.
(*1)**

100226

1. Read the barcode above to specify the time interval before aiming ends. (It is set to 1 by default.)

2. Read the "Decimal Value" barcode on page 183. For example, read "1" and "0" for the scanner to automatically shut down after being idle for 10 seconds.

3. Read the "Validate" barcode on the same page to complete this setting.

Update

1.6.8 MULTI-BARCODE MODE

The scanner will be scanning as long as the trigger is held down, capable of decoding one single barcode, as well as multiple unique barcodes one at a time. While decoding a bunch of unique barcodes, if a barcode is decoded twice, its subsequent decoding will be ignored and the scanner is expecting another unique barcode.

▸ The scanning won't stop until you release the trigger.

Multi-Barcode Mode

100209

Note: (1) A barcode is considered unique when its Code Type or data is different from others.
(2) Multi-Barcode Mode has nothing to do with the Multi-Barcode Editor.

Enter Setup

1.7 SCANNING TIMEOUT

Specify the scanning time interval (1~254 sec.; 0= Disable) when the scan mode is set to any of the following –

▸ Laser mode

▸ Auto Off mode

▸ Auto Power Off mode

▸ Aiming mode

Scanner Time-out after 0~254 sec. (*10)

1) Read the barcode above to specify the time interval before the scan engine times out.

2) Read the "Decimal Value" barcode on page 183. For example, read "1" and "5" for the scanner to automatically shut down after being idle for 15 seconds.

3) Read the "Validate" barcode on the same page to complete this setting.

Update

1.8 DELAY BETWEEN RE-READ

This is also referred to as the "Blocking Time", which is used to prevent the scanner from accidentally reading the same barcode twice when the scan mode is set to any of the following –

▶ Continuous mode

▶ Auto Power Off mode

▶ Alternate mode

100 ms
100216

200 ms
100217

*400 ms
100218

800 ms
100219

1 sec
100220

2 sec
100221

3 sec
100222

5 sec
100223

Enter Setup

1.9 READ REDUNDANCY FOR ALL SYMBLOGIES

Select the level of reading security. For example,

▶ If "No Redundancy" is selected, one successful decoding will make the reading valid and induce the "READER Event".

▶ If "Three Times" is selected, it will take a total of four consecutive successful decoding of the same barcode to make the reading valid. The higher the reading security is (that is, the more redundancy the user selects), the slower the reading speed gets.

It is obvious that the more redundancy you select, the higher the reading security is, and thus, the slower the reading speed becomes. You will have to compromise between reading security and decoding speed.

*No Redundancy

One Time

Two Times

Three Times

Update
1.10 ADDON SECURITY FOR UPC/EAN BARCODES

The scanner is capable of decoding a mix of UPC/EAN barcodes with and without addons. The read redundancy (0~30 times) allows changing the number of times to decode a UPC/EAN barcode before transmission. The more redundancy you select, the higher the reading security is, and thus, the slower the reading speed becomes. You will have to compromise between reading security and decoding speed.

Note: UPC/EAN Addon 2 and Addon 5 must be enabled individually for this setting to take effect.

**Addon Security Level
(*0~30)**

100380

1) Read the barcode above to specify the read redundancy for UPC/EAN barcodes. (It is set to 0 by default.)

2) Read the "Decimal Value" barcode on page 183. For example, read "1" and "2" for the scanner to re-read the barcode for 12 times.

3) Read the "Validate" barcode on the same page to complete this setting.

Enter Setup

1.11 AUTO-SENSE MODE (1500/1500P ONLY)

1.11.1 BEHAVIOR OF 1500

For 1500, this mode is available when you seat the scanner in the Auto-sense stand and scan the Enable barcode. When you enable this mode, it will force the scanner to apply Laser mode as the scan mode. However, it works slightly different from the original Laser mode. Now the scanner will be expecting barcodes as long as it is seated in the Auto-sense Stand, as shown below. Whenever a barcode is brought within range, the scanner will be able to decode it.

Enable

100271

*Disable

100270

Note: Enabling Auto-sense will force the scanner into Laser mode. To stop this mode, you may remove the scanner from the stand or have the scanner read the "Disable (Auto-sense)" barcode above. It will then return to Laser mode. If Laser mode is not desired, proceed to select a scan mode best suits your application.
1.11.2 BEHAVIOR OF 1500P

For 1500P, Auto-sense is only available when the scanner is working in Laser Mode. 1500P will be expecting barcodes as long as it is seated in the Auto-sense stand. Whenever a barcode is brought within range, the scanner will be able to decode it.

To stop this mode, just remove the scanner from the stand.

*Enable

100271

Disable

100270

29

Update

You can determine the occasion for decoding destination barcodes. As the setting barcodes shown below, "Detection By Barcode" means when an object is judged a barcode, the scanner decodes the destination barcode. "Detection by Motion" means when an object is detected moving, the scanner decodes the destination barcode.

*Detection By Barcode

101481

Detection By Motion

101482

Besides, users can determine the auto-sense detection level ranging from 0 to 7 (default value is set to 4; greater number means higher detection sensitivity) when the scanner is seated in the stand and set in the "Detection By Motion" mode.

Auto-sense Detection Level 0~7 (*4)

101483

1) Read the barcode above to specify the Auto-sense Detection level.

2) Read the "Decimal Value" barcode on page 183. For example, read "1" to set the Auto-sense Detection Level on 1.

3) Read the "Validate" barcode on the same page to complete this setting.

1.11.3 AMBIENT LIGHT

When the ambient light is too dim to activate the sensor, you may have the scanner read the "High Sensitivity" barcode to improve performance. Starting from firmware version 1.12, it will emit scan beam every 300 milliseconds when "High Sensitivity" is enabled.

High Sensitivity

101469

*Normal

101468

Note: If the ambient light is under 100 lux, we suggest that you either add lighting or use Continuous mode instead.

Enter Setup

1.12 NEGATIVE BARCODES

Normally, barcodes are printed with the color of the bars darker than that of the spaces. But for negative barcodes, they are printed in the opposite sense just like negative films. The spaces of negative barcodes are printed with a color darker than that of the bars. You can configure the scanner to be able to read negative barcodes.

Enable

100225

*Disable

100224

Update
1.13 EFFECTIVE DECODING AREA

By default, the effective decoding area is 100% covered by the scanned area. However, you may narrow down the decoding area to prevent reading the wrong barcode when a number of barcodes are printed closely. The scanner will only read barcodes that appear in the effective decoding area.

Read the barcode "Centering On" and specify the percentage to narrow down the decoding area. For example, read "Left 10%" and then "Right 30%" for the scanner to decode barcode "A" only.

SELECTING OUTPUT INTERFACE

In order to establish a proper connection between your computer and the scanner, we suggest that you follow these instructions –

I) Connect the provided interface cable between the scanner and your computer. The scanner is capable of detecting the interface.

▸ If using the RS-232 cable, join the power supply cord.

▸ If using the USB cable, it is set to USB HID by default.

If "USB Virtual COM" is desired, have the scanner read the setup barcodes.

Cable Auto-Detection	Defaults
Keyboard Wedge	PCAT (US) for keyboard type
RS-232	9600 bps, 8 bits, No parity, 1 stop bit
USB	USB HID and PCAT (US) for keyboard type

Note: Please make sure the wired cable supports auto-detection. Check whether there is a sticker on the cable, stating "Cable Detection Supported". The information of available cables for a particular model is listed in the specifications table. Refer to Specifications.

2) Have the scanner read the "Enter Setup" barcode to enter the configuration mode.

3) Have the scanner read the associated barcode to activate the desired interface.

See the following sections for output interfaces supported.

▸ If you are connecting the scanner to the USB port of the host computer via USB HID cable (part # 307), refer to 2.1 Keyboard Wedge for related settings.

▸ If you are connecting the scanner to the USB port of the host computer via USB Virtual COM cable (part # 308), refer to 2.2 RS-232 related settings.

▸ If you are connecting the scanner to the IBM POS 4683/4694 via the converter cable (part # 346), refer to 2.1 Keyboard Wedge for related settings.

4) Have the scanner read the barcodes for related settings.

5) Have the scanner read the "Update" barcode to apply the settings and exit the configuration mode.

Update

Note: By default, the output interface is set to "Keyboard Wedge".

Insert a pin and press it hard to release the interface cable.

2.1.2 KEYBOARD SETTINGS

▶ Alphabets Layout

▶ Digits Layout

▶ Capital Lock Type

▶ Capital Lock Setting

▶ Alphabets Transmission

▶ Digits Transmission

▶ Alternate Composing

▶ Laptop Support

Alphabets Layout

By default, the alphabets layout is set to normal mode, also known as the standard English layout. Select French or German keyboard layout if necessary. The scanner will make adjustments when sending the "A", "Q", "W", "Z", "Y", and "M" characters according to this setting.

*Normal

100060

AZERTY

100061

QWERTZ

100062

Note: This setting only works when the keyboard type selected is US keyboard, such as PCAT (US). The Alphabets Layout and Digits Layout setting must match your keyboard.

Update

US Keyboard Style – Normal

QWERTY layout, which is normally used in western countries.

▶ Select "Lower Row" for the "Digits Layout" setting for the upper row is for special characters.

French Keyboard Style – AZERTY

French layout; see below for French Keyboard Style.

▶ Select "Upper Row" for the "Digits Layout" setting for the lower row is for special characters.

German Keyboard Layout – QWERTZ

German layout; see below for German Keyboard Style.

▶ Select "Lower Row" for the "Digits Layout" setting for the upper row is for special characters.

Enter Setup

Digits Layout

Select a proper layout that matches the alphabets layout. The scanner will make adjustments according to this setting.

Options	Description
Normal	Depends on the [Shift] key or [Shift Lock] setting
Lower Row	For QWERTY or QWERTZ keyboard
Upper Row	For AZERTY keyboard

*Normal

100046

Upper Row

100049

Lower Row

100048

Note: This setting is meant to be used with the Alphabets Layout; and perhaps with the Character Substitution setting when support to certain keyboard types (languages) is unavailable but required.

Update

Capital Lock Type & Setting

In order to send the alphabets with correct case, the scanner needs to know the status of Caps Lock on the keyboard. Incorrect settings may result in reversed case of the alphabets being transmitted.

Cap Lock Type	Description
Normal	Normal type
Capital Lock	When enabled, the keys of alphabetic characters will be interpreted as capital letters. However, this does not affect the number or punctuation keys.
Shift Lock	When enabled, the keys of alphabetic characters will be interpreted as capital letters. In addition, this affects the number or punctuation keys.

*Normal

100042

Shift Lock

100045

Capital Lock

100044

Capital Lock State	Description
Capital Lock OFF	Assuming that the status of Caps Lock on the keyboard is OFF, transmitted characters are exactly the same as in the barcode (when "case-sensitive" is selected for Alphabets Transmission).
Capital Lock ON	Assuming that the status of Caps Lock on the keyboard is ON, transmitted characters are exactly the same as in the barcode (when "case-sensitive" is selected for Alphabets Transmission). ▶ Refer to the Capital Lock Type above.
Auto Detection	The scanner will automatically detect the status of Caps Lock on the keyboard before data is transmitted; transmitted characters are exactly the same as in the barcode (when "case-sensitive" is selected for Alphabets Transmission).

Auto Detect

100054

Capital Lock ON

100053

Enter Setup

*Capital Lock OFF

100052

Alphabets Transmission

By default, the alphabets transmission is case-sensitive, meaning that the alphabets will be transmitted according to their original case, the status of Caps Lock on the keyboard, as well as the Capital Lock setting. Select [Ignore Case] to have alphabets transmitted according to the status of Caps Lock on the keyboard only.

Ignore Case

100051

*Case-sensitive

100050

Refer to 4.1 Letter Case.

45

Digits Transmission

By default, the alphanumeric keypad is used for transmitting digits. Select "Numeric Keypad" if you wish to use the keys on the numeric keypad.

Numeric Key

‖‖‖‖‖‖‖‖‖‖‖
100041

*Alphanumeric Key

‖‖‖‖‖‖‖‖‖‖‖
100040

Note: If you select "Numeric Keypad", the Num Lock status of the physical keyboard should be "ON".

‖‖‖‖‖‖‖‖‖‖‖ Enter Setup

ALT Composing

By default, Alternate key composing is disabled. Select [Yes] to allow emulating Alternate key code of a specific keyboard character. For example, [Alt] + [065] will be sent to host for the character "A" regardless the keyboard type you are using.

Yes

100057

*No

100056

Laptop Support

By default, laptop support is disabled. It is suggested to enable this feature if you connect the wedge cable to a laptop without an external keyboard being inter-connected.

Enable

100059

*Disable

100058

2.1.3 INTER-CHARACTER DELAY

By default, the inter-character delay is set to zero. Specify a value, ranging from 0 to 254 in units of millisecond, to match the computer response time of the keyboard interface. Such delay time is inserted between every character being transmitted. The longer the delay time is, the slower the transmission speed will be.

Inter-Character Delay… (*0~254)

100011

1) Read the barcode above to specify the inter-character delay.

2) Read the "Decimal Value" barcode on page 183 for the desired inter-character delay (millisecond).

3) Read the "Validate" barcode on the same page to complete this setting.

Update

2.1.4 INTER-FUNCTION DELAY

By default, the inter-function delay is set to zero. Specify a value, ranging from 0 to 254 in units of millisecond, to match the computer response time of the keyboard interface. Such delay time is inserted between every function code (0x01 ~ 0x1F) being transmitted. The longer the delay time is, the slower the transmission speed will be.

Inter-Function
Delay… (*0~254)

100012

1) Read the barcode above to specify the inter-function delay.

2) Read the "Decimal Value" barcode on page 183 for the desired inter-function delay (millisecond).

3) Read the "Validate" barcode on the same page to complete this setting.

2.1.5 SPECIAL KEYBOARD FEATURE

By default, this interface doesn't employ special function codes (0x01 ~ 0x1F) defined in the Keyboard Wedge Table for users may want to get rid of these special codes within the barcodes to avoid data error.

Or you can enable the "Bypass with Control Character Output for Windows" function to output control characters ranging from 0x01 to 0x1F in text form. For instance, [BS] (the backspace) is output rather than 0x08 when this function is enabled.

You can decide whether to apply the special keyboard feature. For further details please refer to Keyboard Wedge Table.

Enter Setup

2.2 RS-232

Use the RS-232 cable to connect the scanner to the serial port of PC and join the power adaptor to the RS-232 connector. The associated RS-232 parameters must match those configured on the computer. The scanned data will be transmitted to the serial port.

RS-232 Settings	Defaults
Baud Rate, Data Bit, Parity, Stop Bit	9600 bps, 8 bits, No parity, 1 stop bit
Flow Control	None
Inter-Character Delay	0 (ms)
Inter-Function Delay	0 (ms)
ACK/NAK Timeout	0
ACK/NAK Beep	Disable

‖‖‖‖‖‖‖‖‖‖‖   Update

2.2.7 INTER-CHARACTER DELAY

By default, the inter-character delay is zero. Specify a value, ranging from 0 to 254 in units of millisecond, to match the computer response time. Such delay time is inserted between every character being transmitted. The longer the delay time is, the slower the transmission speed will be.

Inter-Character Delay… (*0~254)

||||||||||||
100011

1) Read the barcode above to specify the inter-character delay.

2) Read the "Decimal Value" barcode on page 183 for the desired inter-character delay (millisecond).

3) Read the "Validate" barcode on the same page to complete this setting.

2.2.8 INTER-FUNCTION DELAY

By default, the inter-function delay is set to zero. Specify a value, ranging from 0 to 254 in units of millisecond, to match the computer response time of the keyboard interface. Such delay time is inserted between every function code (0x01 ~ 0x1F) being transmitted. The longer the delay time is, the slower the transmission speed will be.

Inter-Function Delay… (*0~254)

||||||||||||
100012

1) Read this barcode above to specify the inter-function delay.

2) Read the "Decimal Value" barcode on page 183 for the desired inter-function delay (millisecond).

3) Read the "Validate" barcode on the same page to complete this setting.

Enter Setup

2.2.9 ACK/NAK TIMEOUT

By default, the scanner sends data to the host without waiting for an ACK/NAK response before sending more data. Specify a value, ranging from 1 to 99 in units of 0.1 second. If no response within the specified period of time, the scanner will attempt to send the same data two more times. If all three attempts fail without any notification, data loss will occur.

ACK/NAK Time-out after … (*0~99)

```
100013
```

1) Read the barcode above to specify the time interval for the scanner to send data and wait for a response from the host.

2) Read the "Decimal Value" barcode on page 183. For example, read "1" and "0" for the scanner to automatically shut down after being idle for 1 second.

3) Read the "Validate" barcode on the same page to complete this setting.

ACK/NAK Error Beep

Enable Error Beep

```
100015
```

*Disable Error Beep

```
100014
```

Note: We suggest enabling the error beep so that you will be notified of such data loss and have the scanner re-read data.

Update

2.3 WAND EMULATION

The wand emulation cable allows you to connect the scanner to a data terminal that is expecting input from a wand scanner. Note that this function doesn't support 1500P.

Wand Emulation Settings	Defaults
Normal State	Low
Bar State	High
Module Time	1 (ms)
Margin Time	20 (ms)
Output Format	Normal Output

2.3.1 ACTIVATE WAND EMULATION

Activate Wand Emulation

100002

2.3.2 NORMAL STATE

By default, the signal level is set to "Low" for the normal state when not transmitting any barcode image (= white spaces in a barcode).

2.3.6 OUTPUT FORMAT

By default, the output format is set to "Normal Output" to send data to the terminal in the format of the scanned barcodes, except for GS1 DataBar. By scanning the Code 128 Output barcode below, users can determine all scanned barcodes to be send to the data terminal in the format of Code 128.

*Normal Output

100140

Code 128 Output

100141

Update

2.4 DIRECT USB HID

For USB HID, connect the scanner to the USB port of PC. Run any text editor on the computer, and the scanned data will be transmitted to the computer.

HID Settings	Defaults
Keyboard Type	PCAT (US)
Digits Layout	Normal
Capital Lock Type	Normal
Capital Lock State	Off
Alphabets Transmission	Case-sensitive
Digits Transmission	Alphanumeric keypad
Alternate Composing	No
Inter-Character Delay	0 (ms)
Inter-Function Delay	0 (ms)

2.4.1 ACTIVATE USB HID & SELECT KEYBOARD TYPE

When USB HID interface is activated, it will have to select a keyboard type to complete this setting.

Activate Direct USB HID & Select Keyboard Type…

100009

1) Read the barcode above to activate USB HID and select a keyboard type.

2) Read the "Decimal Value" barcode on page 183. Refer to the table below for the number of desired keyboard type.

3) Read the "Validate" barcode on the same page to complete this setting.

Enter Setup

USB HID

By default, the keyboard type is set to PCAT (US). The following keyboard types are supported —

No.	Keyboard Type	No.	Keyboard Type
64	PCAT (US)	79	PCAT (Danish)
65	PCAT (French)	80	Reserved
66	PCAT (German)	81	PCAT (Greek)
67	PCAT (Italy)	82	Reserved
68	PCAT (Swedish)	83	Reserved
69	PCAT (Norwegian)	84	Reserved
70	PCAT (UK)	85	Reserved
71	PCAT (Belgium)	86	Reserved
72	PCAT (Spanish)	87	Reserved
73	PCAT (Portuguese)	88	Reserved
74	PS55 A01-2 (Japanese)	89	Reserved
75	User-defined table	90	Reserved
76	PCAT (Turkish)	91	PCAT (Slovenian)
77	PCAT (Hungarian)	92	PCAT (Mexican Spanish)
78	PCAT (Switzerland German)		

Update

2.4.2 KEYBOARD SETTINGS

▶ Alphabets Layout
▶ Digits Layout
▶ Capital Lock Type
▶ Capital Lock Setting
▶ Alphabets Transmission
▶ Digits Transmission
▶ Alternate Composing

Alphabets Layout

By default, the alphabets layout is set to normal mode, also known as the standard English layout. Select French or German keyboard layout if necessary. The scanner will make adjustments when sending the "A", "Q", "W", "Z", "Y", and "M" characters according to this setting.

*Normal

100060

AZERTY

100061

QWERTZ

100062

Note: This setting only works when the keyboard type selected is US keyboard, such as PCAT (US). The Alphabets Layout and Digits Layout setting must match your keyboard.

Enter Setup

US Keyboard Style – Normal

QWERTY layout, which is normally used in western countries.

▶ Select "Lower Row" for the "Digits Layout" setting for the upper row is for special characters.

French Keyboard Style – AZERTY

French layout; see below for French Keyboard Style.

▶ Select "Upper Row" for the "Digits Layout" setting for the lower row is for special characters.

German Keyboard Layout – QWERTZ

German layout; see below for German Keyboard Style.

▶ Select "Lower Row" for the "Digits Layout" setting for the upper row is for special characters.

Update

Digits Layout

Select a proper layout that matches the alphabets layout. The scanner will make adjustments according to this setting.

Options	Description
Normal	Depends on the [Shift] key or [Shift Lock] setting
Lower Row	For QWERTY or QWERTZ keyboard
Upper Row	For AZERTY keyboard

*Normal

100046

Upper Row

100049

Lower Row

100048

Note: This setting is meant to be used with the Character Substitution setting when support to certain keyboard types (languages) is unavailable but required.

Enter Setup

Capital Lock Type & Setting

In order to send the alphabets with correct case, the scanner needs to know the status of Caps Lock on the keyboard. Incorrect settings may result in reversed case of the alphabets being transmitted.

Cap Lock Type	Description
Normal	Normal type
Capital Lock	When enabled, the keys of alphabetic characters will be interpreted as capital letters. However, this does not affect the number or punctuation keys.
Shift Lock	When enabled, the keys of alphabetic characters will be interpreted as capital letters. In addition, this affects the number or punctuation keys.

*Normal

100042

Shift Lock

100045

Capital Lock

100044

Capital Lock State	Description
Capital Lock OFF	Assuming that the status of Caps Lock on the keyboard is OFF, transmitted characters are exactly the same as in the barcode (when "case-sensitive" is selected for Alphabets Transmission).
Capital Lock ON	Assuming that the status of Caps Lock on the keyboard is ON, transmitted characters are exactly the same as in the barcode (when "case-sensitive" is selected for Alphabets Transmission). ▶ Refer to the Capital Lock Type above.
Auto Detection	The scanner will automatically detect the status of Caps Lock on the keyboard before data is transmitted; transmitted characters are exactly the same as in the barcode (when "case-sensitive" is selected for Alphabets Transmission).

Auto Detect

100054

Capital Lock ON

100053

Update

*Capital Lock OFF

100052

Alphabets Transmission

By default, the alphabets transmission is case-sensitive, meaning that the alphabets will be transmitted according to their original case, the status of Caps Lock on the keyboard, as well as the Capital Lock setting. Select [Ignore Case] to have alphabets transmitted according to the status of Caps Lock on the keyboard only.

Ignore Case

100051

*Case-sensitive

100050

Abcd

Refer to 4.1 Letter Case.

1. Letter Case for Output Format

*Normal	Upper Case	Lower Case
Abcd	ABCD	abcd
2. Alphabets Transmission for Keyboard Wedge & Bluetooth HID

*Case-sensitive   Ignore Case

3a. Check Caps Lock on the keyboard   3b. Check Caps Lock on the keyboard

ON   OFF   ON   OFF

4. Check Capital Lock setting
	ON	OFF	ON	OFF
*Capital Lock OFF	aBCD	Abcd	ABCD	abcd
Capital Lock ON	Abcd	aBCD		
Auto Detection	Abcd	Abcd		

Enter Setup

Digits Transmission

By default, the alphanumeric keypad is used for transmitting digits. Select "Numeric Keypad" if you wish to use the keys on the numeric keypad.

Numeric Key

||||||||||||||||||
100041

*Alphanumeric Key

||||||||||||||||||
100040
Note: If you select "Numeric Keypad", the Num Lock status of the physical keyboard should be "ON".

ALT Composing

By default, Alternate key composing is disabled. Select [Yes] to allow emulating Alternate key code of a specific keyboard character. For example, [Alt] + [065] will be sent to host for the character "A" regardless the keyboard type using.

Yes

||||||||||||||||||
100057

*No

||||||||||||||||||
100056

||||||||||||||||||
Update

2.4.3 INTER-CHARACTER DELAY

By default, the inter-character delay is set to zero. Specify a value, ranging from 0 to 254 in units of millisecond, to match the computer response time of the keyboard interface. Such delay time is inserted between every character being transmitted. The longer the delay time is, the slower the transmission speed will be.

Inter-Character
Delay… (*0~254)

100011

1) Read the barcode above to specify the inter-character delay.

2) Read the "Decimal Value" barcode on page 183 for the desired inter-character delay (millisecond).

3) Read the "Validate" barcode on the same page to complete this setting.

2.4.4 INTER-FUNCTION DELAY

By default, the inter-function delay is set to zero. Specify a value, ranging from 0 to 254 in units of millisecond, to match the computer response time of the keyboard interface. Such delay time is inserted between every function code (0x01 ~ 0x1F) being transmitted. The longer the delay time is, the slower the transmission speed will be.

Inter-Function
Delay… (*0~254)

100012

1) Read the barcode above to specify the inter-function delay.

2) Read the "Decimal Value" barcode on page 183 for the desired inter-character delay (millisecond).

3) Read the "Validate" barcode on the same page to complete this setting.

Enter Setup

2.4.5 HID CHARACTER TRANSMIT MODE

By default, HID interface sends data to the host character by character. You may have the scanner read the "Batch Processing" barcode to process data in batch.

Batch Processing

100064

*By Character

100065

2.4.6 SPECIAL KEYBOARD FEATURE

Refer to 2.1.5 Special Keyboard Feature.

2.4.7 USB POLLING INTERVAL

Scan the barcodes below to specify the USB polling interval ranging from 1 to 15ms. It's set to 10ms by default.

Set USB polling interval 1~15 ms(*4)

100184

1) Read the barcode above to specify the USB polling interval time.

2) Read the "Decimal Value" barcode on page 183.

3) Read the "Validate" barcode on the same page to complete this setting.

Update

2.5 DIRECT USB VCOM

For USB Virtual COM, connect the scanner to the USB port of PC. Run HyperTerminal.exe on the computer, and the scanned data will be transmitted to the computer.

Note: If using USB Virtual COM for the first time, you must install the accompanying driver beforehand. Driver version 5.4 or later is required. Please remove older versions! Instead, users can also decide to use the USB communication device class (CDC) driver by selecting Direct USB VCOM_CDC. Refer to 2.6 Direct USB VCOM_CDC.

2.5.1 ACTIVATE USB VIRTUAL COM

Activate Direct USB Virtual COM

‖‖‖‖‖‖‖‖‖‖‖‖‖‖
100008

2.5.2 INTER-FUNCTION DELAY

By default, the inter-function delay is set to zero. Specify a value, ranging from 0 to 254 in units of millisecond, to match the computer response time of the keyboard interface. Such delay time is inserted between every function code (0x01 ~ 0x1F) being transmitted. The longer the delay time is, the slower the transmission speed will be.

Inter-Function Delay… (*0~254)

‖‖‖‖‖‖‖‖‖‖‖‖‖‖
100012

1) Read the barcode above to specify the inter-function delay.

2) Read the "Decimal Value" barcode on page 183 for the desired inter-character delay (millisecond).

3) Read the "Validate" barcode on the same page to complete this setting.

‖‖‖‖‖‖‖‖‖‖‖‖‖‖‖‖‖
Enter Setup

2.5.3 ACK/NAK TIMEOUT

By default, the scanner sends data to the host without waiting for an ACK/NAK response before sending more data. Specify a value, ranging from 1 to 99 in units of 0.1 second. If no response within the specified period of time, the scanner will attempt to send the same data two more times. If all three attempts fail without any notification, data loss will occur.

ACK/NAK Time-out after … (*0~99)

```
100013
```

1) Read the barcode above to specify the time interval for the scanner to send data and wait for a response from the host.

2) Read the "Decimal Value" barcode on page 183. For example, read "1" and "0" for the scanner to automatically shut down after being idle for 1 second.

3) Read the "Validate" barcode on the same page to complete this setting.

ACK/NAK Error Beep

Enable Error Beep

```
100015
```

*Disable Error Beep

```
100014
```

Note: We suggest enabling the error beep so that you will be notified of such data loss and have the scanner re-read data.

Update

2.6 DIRECT USB VCOM_CDC

For USB Virtual COM, connect the scanner to the USB port of PC. Run HyperTerminal.exe on the computer, and the scanned data will be transmitted to the computer.

Note: If using USB Virtual COM for the first time, you must install the accompanying USB VCOM_CDC driver beforehand.

2.6.1 ACTIVATE USB VCOM_CDC

Activate Direct USB Virtual COM_CDC

100010

2.6.2 INTER-FUNCTION DELAY

By default, the inter-function delay is set to zero. Specify a value, ranging from 0 to 254 in units of millisecond, to match the computer response time of the keyboard interface. Such delay time is inserted between every function code (0x01 ~ 0x1F) being transmitted. The longer the delay time is, the slower the transmission speed will be.

Inter-Function Delay… (*0~254)

100012

1) Read the barcode above to specify the inter-function delay.

2) Read the "Decimal Value" barcode on page 183 for the desired inter-character delay (millisecond).

3) Read the "Validate" barcode on the same page to complete this setting.

Enter Setup

2.6.3 ACK/NAK TIMEOUT

By default, the scanner sends data to the host without waiting for an ACK/NAK response before sending more data. Specify a value, ranging from 1 to 99 in units of 0.1 second. If no response within the specified period of time, the scanner will attempt to send the same data two more times. If all three attempts fail without any notification, data loss will occur.

ACK/NAK Time-out after … (*0~99)

100013

1) Read the barcode above to specify the time interval for the scanner to send data and wait for a response from the host.

2) Read the "Decimal Value" barcode on page 183. For example, read "1" and "0" for the scanner to automatically shut down after being idle for 1 second.

3) Read the "Validate" barcode on the same page to complete this setting.

ACK/NAK Error Beep

Enable Error Beep

100015

*Disable Error Beep

100014

Note: We suggest enabling the error beep so that you will be notified of such data loss and have the scanner re-read data.

Update

2.7 DIRECT USB OPOS

Before using the USB OPOS interface, users have to install CipherLab's scanner OPOS kit on the Windows 32/64 bits and Windows Embedded operating systems. Besides, make sure your scanner which supports OPOS has been upgraded.

Change to OPOS

100033

The OPOS Kit (Driver & OPOS User Guide included) can be downloaded from:

http://scanmaster.cipherlab.com/download/opos/CipherLabOPOSKit-latest.exe

Please refer to the CipherLab OPOS User Guide for further details.

Enter Setup

CHANGING SYMBOLOGY SETTINGS

In this chapter, a brief on the symbology settings is provided for your reference.

Users can simply scan the setting barcodes below to disable/enable all symbologies.

Enable

109805

Disable

109804

Settings for each particular symbology will be depicted as follows.

IN THIS CHAPTER

Update

3.1 CODABAR

*Enable

‖‖‖‖‖‖‖‖‖‖‖
100313

Disable

‖‖‖‖‖‖‖‖‖‖‖
100312

3.1.1 SECURITY LEVEL

Security Level renders more decoding accuracy giving consideration to barcodes' print quality. The scanner allows you to change the CODABAR security level between high or normal level.

* High

‖‖‖‖‖‖‖‖‖‖‖
100490

Normal

‖‖‖‖‖‖‖‖‖‖‖
100491

3.1.2 START/STOP TRANSMISSION

Decide whether to include the start/stop characters in the data being transmitted.

Transmit Start/Stop Characters

‖‖‖‖‖‖‖‖‖‖‖
100441

*Do Not Transmit

‖‖‖‖‖‖‖‖‖‖‖
100440

‖‖‖‖‖‖‖‖‖‖‖   Enter Setup

3.1.3 START/STOP CHARACTER SELECTION

Select one of the four different start/stop character pairs —

* abcd/abcd

100436

abcd/tn*e

100437

ABCD/ABCD

100438

ABCD/TN*E

100439

3.1.4 CLSI CONVERSION

When enabled, the CLSI editing strips the start/stop characters and inserts a space after the first, fifth, and tenth characters of a 14-character Codabar barcode.

Apply CLSI Editing

100443

*Do Not Apply

100442

Note: The 14-character barcode length does not include start/stop characters.

75

Update

3.2 CODE 25 – INDUSTRIAL 25

*Enable

100307

Disable

100306

3.2.1 SELECT START/STOP PATTERN

This decides the readability of all 2 of 5 symbology variants. For example, flight tickets actually use an Industrial 2 of 5 barcode but with Interleaved 2 of 5 start/stop pattern. In order to read this barcode, the start/stop pattern selection parameter of Industrial 2 of 5 should set to "Interleaved 25".

*Industrial 25 Start/Stop Pattern

100412

Interleaved 25 Start/Stop Pattern

100413

3.2.2 VERIFY CHECK DIGIT

Decide whether to verify the check digit. If incorrect, the barcode will not be accepted.

Verify Industrial 25 Check Digit

*Do Not Verify

3.2.3 TRANSMIT CHECK DIGIT

Decide whether to include the check digit in the data being transmitted.

*Transmit Industrial 25 Check Digit

Do Not Transmit

Update

3.2.4 CODE LENGTH QUALIFICATION

To prevent the "short scan" error, define the "Length Qualification" settings to ensure that the correct barcode is read by qualifying the allowable code length.

▸ If "Max/Min Length" is selected, the maximum length and the minimum length must be specified. It only accepts those barcodes with lengths that fall between max/min lengths specified.

▸ If "Fixed Length" is selected, up to 2 fixed lengths can be specified.

1) Read the barcode to enable either Max. /Min. Length qualification or Fixed Length(s) qualification.

*Enable Max./Min. Length (0~127)…

100601

Enable Fixed Length(s)…

100600

2) Read the barcode for Max. Length or Fixed Length 1, and follow steps 3~4.

Repeat steps 2~4 for Min. Length or Fixed Length 2.

Max. Length (*127) or Fixed Length 1

100602

Min. Length (*4) or Fixed Length 2

100603

3) Read the "Decimal Value" barcode on page 183 for the desired length.

4) Read the "Validate" barcode on the same page to complete this setting.

Enter Setup

3.2.5 SECURITY LEVEL (1500P ONLY)

Security Level renders more decoding accuracy giving consideration to barcodes' print quality. Decide the security level for reading Code 25 barcodes.

Normal

100544

*High

100543

3.3 CODE 25 – INTERLEAVED 25

*Enable

100309

Disable

100308

3.3.1 SELECT START/STOP PATTERN

This decides the readability of all 2 of 5 symbology variants. For example, flight tickets actually use an Industrial 2 of 5 barcode but with Interleaved 2 of 5 start/stop pattern. In order to read this barcode, the start/stop pattern selection parameter of Industrial 2 of 5 should set to "Interleaved 25".

Warning:	Because of the way system number 1 is encoded, if both system numbers are enabled, the user might suffer from short scanning UPC-A or EAN-13 barcodes into UPC-E1 barcodes.

3.20.2 CONVERT TO UPC-A

Decide whether to expand the read UPC-E barcode, as well as its addons, into UPC-A.

▶ After conversion, the data follows UPC-A format and is affected by UPC-A programming selections (e.g. System Number, Check Digit).

Convert UPC-E to UPC-A

DEFINING OUTPUT FORMAT

You may configure in which format the collected data will be output to the host computer. Barcode read by the scanner will be processed in the following sequence –

1) Perform character substitution on the data scanned.

2) Add Code ID and Length Code to the front of the data:`[Code ID][Length Code][Data]`

3) Process the whole data in step 2 with user formats. Data is now divided into fields by user specified rules. Refer to Chapter 5 Applying Formats for Data Editing.

4) Add Prefix Code and Suffix Code before transmission:`[Prefix Code][Processed Data][Suffix Code]`

IN THIS CHAPTER

4.1 LETTER CASE

By default, the alphabets transmission is case-sensitive, meaning that the alphabets will be transmitted according to their original case. Ignoring the original letter case, select [Upper Case] to output data in upper case only; otherwise, select [Lower Case] to output data in lower case only.

*Normal

Upper Case

Lower Case

Update

4.2 CHARACTER SUBSTITUTION

Character substitution is performed on every occurrence of the first character specified. If only one character is specified, every occurrence of that character in the barcode will be taken away.

▶ The first character will be replaced by the second character(s).

▶ Up to three sets of character substitution can be configured.

▶ If "Keyboard Wedge" is configured for interface, Key Type and Key Status will then become applicable. You may decide whether or not to apply Key Status when "Normal Key" is selected for Key Type.

Key Type		Key Status
Scan Code	Only 1 scan code value is allowed. Refer to 4.2.1 Single Character Substitution.	N/A
Normal Key	Up to 3 character strings are allowed.	▶ Add Shift ▶ Add Left Ctrl ▶ Add Left Alt ▶ Add Right Ctrl ▶ Add Right Alt Refer to Keyboard Wedge Table.

Note: The character substitution is performed only on the barcode itself and before the processing of editing formats. It is not applicable to the Prefix/Suffix Code, Code ID, Length Code, or any Additional Field.

‖‖‖‖‖‖‖‖‖‖‖‖‖‖‖ Enter Setup

4.2.1 SINGLE CHARACTER SUBSTITUTION

Please follow steps below to replace a single character with one or more characters.

Configure Set 1

101232

Configure Set 2

101233

Configure Set 3

101234
I)   Read the barcode above to enable character substitution by set.

For example, have the scanner read the "Set 1" barcode to configure the first set of character substitution. The scanner will respond with one short beep, high tone, to indicate more setup barcodes are required.

2)   Read the "Hexadecimal Value" barcode on page 184 for the desired character substitution. The first character specified is the target one to be replaced; then the character(s) specified after the first one will be the replacement character(s). For example,

KEY TYPE = NORMAL

▶   Read "3", "0", "2", and "D" to replace the character "0" with a dash "-".
▶   Read "3", "0", "2", "D", "3", and "0" to replace the character "0" with a dash "-0".

KEY TYPE = SCAN CODE

If you want to replace the character "0" with "a" (= "1C" on the scan code table):

1.   Read "3" and "0".
2.   Read the "Scan Code" barcode.
3.   Read "1" and "C".

KEY TYPE = NORMAL + KEY STATUS = SHIFT

If you want to replace the character "0" with "!" (= "Shift" + "1" on keyboard):

1.   Read "3" and "0".
2.   Read the "Add Shift" barcode.
3.   Read "3" and "1".

3)   Read the "Validate" barcode to complete this setting. (The defined set or sets will be applied to all symbologies by default.)

Update

4.2.2 MULTIPLE CHARACTERS SUBSTITUTION

Users can replace a string up to 16 characters with another one.

Configure Set 1

Set 1 **Target String**	101224	**Set 1** **Replacement String**	101225

Configure Set 2

Set 2 **Target String**	101226	**Set 2** **Replacement String**	101227

Configure Set 3

Set 3 **Target String**	101228	**Set 3** **Replacement String**	101229

Please follow steps below:

1) Respectively read the "Target String" and "Replacement String" barcodes above to enable string substitution by set.

   For example, have the scanner read the "Target String" barcode of "Set 1" to specify the target characters to be replaced. Then the scanner will respond with one short beep indicating users to proceed with barcode reading for target characters.

   Read the "Hexadecimal Value" barcode on page 184 for the desired characters.

2) After specifying the target characters, have the scanner read the "Replacement String" barcode of "Set 1" to specify the replacement characters. Read the "Hexadecimal Value" barcode on page 184 for the desired characters. For example,

Enter Setup

KEY TYPE = NORMAL

Replace the character "0-0" with "***":

1. Read the Target String barcode.

2. Read "3", "0", "2", "D", "3", and "0" barcodes to specify the target string "0-0" (zero, dash, zero).

3. Read the Replacement String barcode.

4. Read "2", "A", "2", "A", "2", and "A" barcodes to specify the replacement string "***" (stars).

KEY TYPE = SCAN CODE

Replace the character "0-0" with "***" ("*" = "3E" on the scan code table):

1. Read the Target String barcode.

2. Read "3", "0", "2", "D", "3", and "0" barcodes to specify the target string "0-0" (zero, dash, zero).

3. Read the Replacement String barcode.

4. Read the "Scan Code" barcode.

5. Read "3", "E", "3", "E", "3", and "E" barcodes to specify the replacement string "***" (stars).

KEY TYPE = NORMAL + KEY STATUS = SHIFT

Replace the character "0-0" with "!!!" ("!" = "Shift" + "1" on keyboard):

1. Read the Target String barcode.

2. Read "3", "0", "2", "D", "3", and "0" barcodes to specify the target string "0-0" (zero, dash, zero).

3. Read the Replacement String barcode.

4. Read the "Add Shift" barcode.

5. Read "3", "1", "3", "1", "3", and "1".

3) Read the "Validate" barcode to complete this setting. (The defined set or sets will be applied to all symbologies by default.)

Update

4.2.3 SYMBOLOGIES FOR CHARACTER SUBSTITUTION (ALL 3 SETS)

By default character substitution will be performed on all symbologies. If the character substitution is not desired with one or more symbologies, read the "Do Not Apply" barcode for each undesired symbologies and all the three sets will be ignored for them.

4.3 PREFIX/SUFFIX CODE

By default, there is no prefix code, and [ENTER] or [CR] (Carriage Return) is configured to be suffix code. Up to 8 characters can be configured, for example, "Barcode_", and you will have the string appear in front of the barcode read, like this — "Barcode_1234567890".

▶ If "Keyboard Wedge" is configured for interface, Key Type and Key Status will then become applicable. You may decide whether or not to apply Key Status when "Normal Key" is selected for Key Type.

Key Type		Key Status
Scan Code	Up to 4 scan code values are allowed.	N/A
Normal Key	Up to 8 character strings are allowed.	▶ Add Shift ▶ Add Left Ctrl ▶ Add Left Alt ▶ Add Right Ctrl ▶ Add Right Alt Refer to Keyboard Wedge Table.

Configure Prefix

‖‖‖‖‖‖‖‖‖‖‖
101230

Configure Suffix

‖‖‖‖‖‖‖‖‖‖‖
101231

1) Read the barcode above to apply prefix code or suffix code separately, and follow steps 2~3. (Max. 8 characters each)

2) Read the "Hexadecimal Value" barcode on page 184 for the desired character string. For example, read "2" and "B" for the scanner to prefix or suffix the character [+].

3) Read the "Validate" barcode to complete this setting.

‖‖‖‖‖‖‖‖‖‖‖‖‖   Enter Setup

4.4 CODE ID

Up to two characters for Code ID can be configured for each symbology. To make the Code ID configuration easier, the scanner provides five pre-defined Code ID sets that you can select one and make necessary changes on it.

▶ If "Keyboard Wedge" is configured for interface, Key Type and Key Status will then become applicable. You may decide whether or not to apply Key Status when "Normal Key" is selected for Key Type.

Key Type		Key Status
Scan Code	Only 1 scan code value is allowed.	N/A
Normal Key	Up to 2 character strings are allowed.	▶ Add Shift ▶ Add Left Ctrl ▶ Add Left Alt ▶ Add Right Ctrl ▶ Add Right Alt Refer to Keyboard Wedge Table.

Note: "]C1" is the Code ID of GS1-128 (EAN-128) barcodes; "]e0" is the default Code ID of GS1 DataBar (RSS) barcodes.

Code 11	K	J	J	D	H

Besides Set 1 ~ 5 of Code ID options, you can also scan the barcode below to apply AIM Code ID as the Code ID option (1500P only).

Apply AIM Code ID

109978

After applying AIM Code ID, three characters are added in front of the output data. "]" is always the first character. The second (Character) and third (Modifier Character) may vary depending on symbologies. Please refer to the table below.

Symbology	Character	Modifier Character
Codabar	F	0: Standard Codabar symbol. No special processing.
Code 11	H	0: Single modulo 11 check character validated and transmitted 1: Two modulo 11 check characters validated and transmitted 3: Check characters validated but not transmitted

Enter Setup

Code 39	A	0: No check character validation nor full ASCII processing. All data transmitted as decoded.
		1: Modulo 43 check character validated and transmitted
		3: Modulo 43 check character validated but not transmitted
		4: Full ASCII character conversion performed. No check character validation.
		5: Full ASCII character conversion performed. Modulo 43 check character validated and transmitted.
		7: Full ASCII character conversion performed. Modulo 43 check character validated but not transmitted.
Code 93	G	No options specified. Always transmit 0.
Code 128	C	0: Standard data packet. No FNC1 in first or second symbol character position after start character.
		1: EAN/UCC-128 data packet. FNC1 in first symbol character position after start character.
		2: FNC1 in second symbol character position after start character.
		4: Concatenation according to International Society for Blood Transfusion specifications has been performed. Concatenated data follows.
GS1 DataBar Family	e	No option specified at this time. Always transmit 0. GS1 DataBar and GS1 DataBar Limited transmit with an Application Identifier "01".
Interleaved 25	I	0: No check character validation
		1: Modulo 10 symbol check character validated and transmitted
		3: Modulo 10 symbol check character validated but not transmitted
MSI	M	0: Modulo 10 symbol check character validated and transmitted
		1: Modulo 10 symbol check character validated but not transmitted
Matrix 25	X	No options specified. Always transmit 0.
Plessey	P	No options specified. Always transmit 0.
Industrial 25	S	No options specified. Always transmit 0.
Telepen	B	No options specified. Always transmit 0.
UPC/EAN	E	0: Standard data packet in full EAN format (13 digits for EAN-13, UPC-A, and UPC-E; does not include add-on data)
		3: Combined data packet comprising 13 digits from EAN-13, UPC-A, or UPC-E symbol and 2 or 5 digits from add-on symbol
		4: EAN-8 data packet

Update

4.4.2 CHANGE CODE ID

1) Read the barcode below to change code ID of a specific symbology.

2) Read the "Hexadecimal Value" barcode on page 184 for the desired character string. For example, read "4" and "4" for applying the character [D] for Code ID.

3) Read the "Validate" barcode to complete this setting.

4.6 MULTI-BARCODE EDITOR

The Multi-Barcode Editor allows you to decide the output sequence of a concatenation of barcodes. Up to five barcodes can be specified. When you enable this mode, it will force the scanner to apply Laser mode as the scan mode.

Note: The Multi-Barcode Editor has nothing to do with Multi-Barcode Mode.

The barcodes that are found meeting the specified criteria below will be arranged in the desired sequence.

‣ Code Type
‣ 4-digit barcode length, excluding prefix, suffix, length code, etc.
‣ Matching the first character of barcode data

Enter Setup
4.6.1 EDIT A CONCATENATION OF BARCODES

Edit Output Sequence

1) Read the barcode above to start editing a concatenation of barcodes.

2) Code Type setting – read the "Hexadecimal Value" barcode on page 184 for Code Type of the (first) barcode. For example, read "4" and "1" for Code 39.

Update

Code Type	Symbology	Code Type	Symbology
40 (@)	ISBT 128	4F (O)	EAN-8 with Addon 5
41 (A)	Code 39	50 (P)	EAN-13
42 (B)	Italian Pharmacode	51 (Q)	EAN-13 with Addon 2
43 (C)	French Pharmacode	52 (R)	EAN-13 with Addon 5
44 (D)	Industrial 25	53 (S)	MSI
45 (E)	Interleaved 25	54 (T)	Plessey
46 (F)	Matrix 25	55 (U)	GS1-128 (EAN-128)
47 (G)	Codabar (NW7)	56 (V)	UPC-A
48 (H)	Code 93	57 (W)	UPC-A with Addon 2
49 (I)	Code 128	58 (X)	UPC-A with Addon 5
4A (J)	UPC-E0 / UPC-E1		
4B (K)	UPC-E with Addon 2	5A (Z)	Telepen
4C (L)	UPC-E with Addon 5	5B ([ )	GS1 DataBar (RSS)
4D (M)	EAN-8	65 (e)	Trioptic Code 39
4E (N)	EAN-8 with Addon 2	67 (g)	Code 11

3) Barcode Length setting – read the "Decimal Value" barcode on page 183 for the 4-digit length of the (first) barcode. For example, read "0065" for barcode length of 65 characters or read "0000" for any length.

Note: If not reading 0000 for any length, the 4-digit length must exclude prefix, suffix (0x0d by default), length code, etc.

4) Matching Character setting – read the "Hexadecimal Value" barcode on page 184 for the 1st character that must be found matching in the (first) barcode. For example, read "4" and "1" for matching character "A" as the first character in the barcode or read "00" for any character.

5) Read twice the "F" barcode on page 184 ("FF") to complete the setting of each barcode.

6) Read the "Validate" barcode to end the editing of the barcode set.

Enter Setup

4.6.2 ACTIVATE THE CONCATENATION OF BARCODES

By default, the output sequence editing of the concatenation of barcodes is not applied.

When "Enforce Output Sequence" is enabled, all barcodes read by the scanner must meet with the criteria for the concatenation. If data is found excluded from all output sequence sets (= not meeting with the criteria), the scanner will not accept the reading, and therefore, data will not be transmitted.

When "Apply Output Sequence" is enabled, only barcodes found meeting with the criteria are counted for the concatenation. Those found not meeting with the criteria are processed normally and individually.

Note: When it requires reading more barcodes to complete the "output sequence" requirements, the scanner will respond with one short beep (low tone). After reading an acceptable barcode, its LED indicator will become solid green and go off quickly (= Good Read).
Upon completion of reading acceptable barcodes, the scanner will respond with one short beep (high tone) and its LED indicator will become solid green and go off quickly (= Good Read).

*Ignore Output Sequence

100617

Enforce Output Sequence

100618

Apply Output Sequence

100619
Warning: When you disable the Multi-Barcode Editor later, the scan mode remains unchanged. If Laser mode is not desired, proceed to select a scan mode best suits your application.

Update

4.7 REMOVAL OF SPECIAL CHARACTER

You can only specify 1 character, but it will remove every matching character encountered from the starting position of barcode data until a different character is met. For example, if it is configured to remove the character "0" (hex value is "30"), one or more zeros will be stripped off the barcode data "012345" and "00012345". However, for barcode data "010333", only the first zero will be stripped off.

Remove Special Character

1) Read the barcode above to remove the specified character.

2) Read the "Hexadecimal Value" barcode on page 184 for the desired character string.

   For example, read "3" and "0" for the scanner to remove the character "0".

3) Read the "Validate" barcode to complete this setting.

Enter Setup

Chapter 5

APPLYING FORMATS FOR DATA EDITING

The scanner allows advanced data editing by applying user-configured editing formats. The whole processed data can be divided into fields by user-specified rules. These fields together with the user-configurable additional fields consist of the data actually sent to the host computer.

[Prefix Code]	[Code ID]	[Length Code]	[Data]	[Suffix Code]	Additional Field(s)
None by default	None by default	None by default	Barcode itself	0x0d by default	

IN THIS CHAPTER

Update

5.1 ACTIVATING EDITING FORMATS

5.1.1 ACTIVATE EDITING FORMATS

If you have already configured any editing format before, you may directly apply the editing format. If not, you must start with configuring an editing format first, and then, activate the editing format when it is desired in use.

101308

5.1.2 EXCLUSIVE DATA EDITING

By default, only barcodes found meeting with the criteria are processed by the editing formats. Those found not meeting with the criteria are processed normally.

When "Exclusive Data Editing" is enabled, all barcodes read by the scanner must be processed by the editing formats. If data is found excluded from all enabled editing formats (= not meeting with the specified criteria), the scanner will not accept the reading, and therefore, data will not be transmitted.

```
End Programming Format

5.2.1 SELECT FORMAT TO CONFIGURE

Start Programming Format

Select one editing format (Format 1~5) and the parameters pertaining to the editing format can then be configured – applicable code type, data length, matching string & location, start position, field adjustment, total number of fields, field settings (field-dividing rule), additional fields, and field transmission sequence.

▶ Up to five different formats can be specified.

Configure Format 1	‖‖‖‖‖‖‖‖‖ 109981
Configure Format 2	‖‖‖‖‖‖‖‖‖ 109982
Configure Format 3	‖‖‖‖‖‖‖‖‖ 109983
Configure Format 4	‖‖‖‖‖‖‖‖‖ 109984
Configure Format 5	‖‖‖‖‖‖‖‖‖ 109985

Note: Before you complete the programming of an editing format, if you have the scanner read any barcode for parameters other than those pertaining to the editing format, it will automatically abort the programming process.

End Programming Format

Having configured all the desired parameters, you must have the scanner read the "End Programming Format" barcode, which can be located at the bottom of every even page in this chapter.

End Programming Format	‖‖‖‖‖‖‖‖‖ 109980

‖‖‖‖‖‖‖‖‖ Update

5.2.2 RESTORE DEFAULT FORMAT

You may select an existing editing format and have the defaults restored. The default settings of an editing format are listed below.

Editing format	Defaults
Applicable Code Type	All
Data Length	0 (No qualification)
Matching String	Disable
Matching String Location	None
Start Position	From head
Field Adjustment	No adjustment
Total Number of Fields	1
Field Setting – field-dividing rule	Not configured
Additional Fields	None
Field Transmission Sequence	F1

**Restore Default
Format**

109990

End Programming Format

5.3 CONFIGURING FORMAT — DEFINE DATA CRITERIA

Three applicable conditions can be configured to check whether the data read by the scanner can be processed by the particular editing format.

Note: Data editing cannot be performed unless the three conditions are all met.

5.3.1 APPLICABLE CODE TYPE

By default, barcodes of all the supported symbologies will be processed by any editing format previously configured and enabled. For quick configuration, you may first clear all, and then select the desired symbologies.

Note: You must have at least one symbology selected.

Update

5.3.2 DATA LENGTH

The length must include prefix, suffix (0x0d by default), length code, etc. By default, barcodes of any length (character count) are eligible for data editing.

▶ You may specify a value from 0 to 254.

▶ When zero is given to both, the scanner will not perform the length qualification.

1) Read the barcode below to specify Max. Length or Min. Length separately, and follow steps 2~3.

Max. Length

‖‖‖‖‖‖‖‖‖‖‖‖‖
101561

Min. Length

‖‖‖‖‖‖‖‖‖‖‖‖‖
101560
2) Read the "<u>Decimal Value</u>" barcode on page 183 for the desired length.

3) Read the "Validate" barcode on the same page to complete this setting.

‖‖‖‖‖‖‖‖‖‖‖   End Programming Format

5.3.3 MATCHING STRING & LOCATION

By default, no matching string is specified, and therefore, it is disabled. You may enable this feature by specifying a matching string; up to four characters are allowed.

▶ When the Matching String Location is zero, the scanner will only check for the existence of the matching string in the barcode data.

▶ You may specify a value from 1 to 254 to indicate where the matching string starts in the barcode data.

1) Read the barcode to specify a matching string.

Matching String…

```
101562
```

2) Read the "Hexadecimal Value" barcode on page 184 for the desired character string.

3) Read the "Validate" barcode to complete this setting.

4) Read the barcode to specify the location of the matching string.

Location of Matching String…

```
101563
```

5) Read the "Decimal Value" barcode on page 183 for the desired location.

6) Read the "Validate" barcode on the same page to complete this setting.

Update

5.4 CONFIGURING FORMAT — DEFINE DATA FIELD

5.4.1 START POSITION

Data can be divided into fields in one of the following direction –

▶ from head (F1) to tail (F5)
▶ from tail (F1) to head (F5)

*From Head

101600

From Tail

101601

5.4.2 FIELD ADJUSTMENT

You may apply equal length to all fields, if necessary. If data is found longer than specified, it will be truncated automatically. When data is found shorter, it will add "Space" (0x20) to field.

*No adjustment

101602

Set length to adjust fields… (*0)

101603

1) Read the barcode above to adjust field by length.

2) Read the "Decimal Value" barcode on page 183 for the desired field length.

3) Read the "Validate" barcode on the same page to complete this setting.

End Programming Format

5.4.3 TOTAL NUMBER OF FIELDS

Data can be divided into at most 6 fields; each of them is numbered from F1 to F6 accordingly. However, only F1~F5 can be configured.

▶ The total number of fields must be specified correctly. If three fields are configured for the editing format, the data characters after F3 will be assigned to F4 automatically. This feature is quite useful especially when data of variable lengths is processed by editing formats.

*One Field

101590

Two Fields

101591

Three Fields

101592

Four Fields

101593

Five Fields

101594

Six Fields

101595

Note: The number of configurable fields is always one less than the total number of fields specified. The extra data characters beyond the last field configured will be automatically assigned to the next field.

Update

5.4.4 FIELD SETTINGS

Data eligible for editing formats is divided into fields by user-specified rules – either using the field terminating string or specified field length.

By Terminating String
Specify the field terminating string. Up to two characters are allowed. The scanner will search for the occurrence of this particular string in the data.
▶ By default, this string will be included in the field. You may discard it.

By Length
Alternatively, you may simply specify the field length. The scanner will assign the next specified number of characters into the field.

Field 1 Setting

1. Read the barcode below to divide field 1 by a specified terminating string.

**Select
Field Separator
to Divide Field 1…**

`101567`

2. Read the "Hexadecimal Value" barcode on page 184 for the desired character string.

3. Read the "Validate" barcode to complete this setting.

4. Read the "Discard Separator" barcode if the field separator is not desired in the field.

*Include Separator

`101565`

Discard Separator

`101564`

If not dividing the field by a specific separator, you may divide it by a specified length.

1. Read the barcode below to divide field 1 by length.

**Divide Field 1
by Length**

`101566`

2. Read the "Decimal Value" barcode on page 183 for the desired field length.

3. Read the "Validate" barcode on the same page to complete this setting.

End Programming Format

Field 2 Setting

1. Read the barcode below to divide field 2 by a specified terminating string.

**Select
Field Separator
to Divide Field 2…**

2. Read the "Hexadecimal Value" barcode on page 184 for the desired character string.

3. Read the "Validate" barcode to complete this setting.

4. Read the "Discard Separator" barcode if the field separator is not desired in the field.

*Include Separator

Discard Separator

If not dividing the field by a specific separator, you may divide it by a specified length.

1. Read the barcode below to divide field 2 by length.

**Divide Field 2
by Length**

2. Read the "Decimal Value" barcode on page 183 for the desired field length.

3. Read the "Validate" barcode on the same page to complete this setting.

Update

Field 3 Setting

1. Read the barcode below to divide field 3 by a specified terminating string.

<div align="right">

**Select
Field Separator
to Divide Field 3…**

</div>

2. Read the "<u>Hexadecimal Value</u>" barcode on page 184 for the desired character string.

3. Read the "Validate" barcode to complete this setting.

4. Read the "Discard Separator" barcode if the field separator is not desired in the field.

<div align="right">

*Include Separator

Discard Separator

</div>

If not dividing the field by a specific separator, you may divide it by a specified length.

1. Read the barcode below to divide field 3 by length.

<div align="right">

**Divide Field 3
by Length**

</div>

2. Read the "<u>Decimal Value</u>" barcode on page 183 for the desired field length.

3. Read the "Validate" barcode on the same page to complete this setting.

End Programming Format

Field 4 Setting

1. Read the barcode below to divide field 4 by a specified terminating string.

**Select
Field Separator
to Divide Field 4...**

101579

2. Read the "Hexadecimal Value" barcode on page 184 for the desired character string.

3. Read the "Validate" barcode to complete this setting.

4. Read the "Discard Separator" barcode if the field separator is not desired in the field.

*Include Separator

101577

Discard Separator

101576

If not dividing the field by a specific separator, you may divide it by a specified length.

1. Read the barcode below to divide field 4 by length.

**Divide Field 4
by Length**

101578

2. Read the "Decimal Value" barcode on page 183 for the desired field length.

3. Read the "Validate" barcode on the same page to complete this setting.

Update

Field 5 Setting

1. Read the barcode below to divide field 5 by a specified terminating string.

**Select
Field Separator
to Divide Field 5…**

2. Read the "Hexadecimal Value" barcode on page 184 for the desired character string.

3. Read the "Validate" barcode to complete this setting.

4. Read the "Discard Separator" barcode if the field separator is not desired in the field.

*Include Separator

Discard Separator

If not dividing the field by a specific separator, you may divide it by a specified length.

1. Read the barcode below to divide field 5 by length.

**Divide Field 5
by Length**

2. Read the "Decimal Value" barcode on page 183 for the desired field length.

3. Read the "Validate" barcode on the same page to complete this setting.

End Programming Format

Additional Fields

Up to five additional fields can be created for each editing format; each of them is numbered from AF1 to AF5 accordingly.

▶ If "Keyboard Wedge" is configured for interface, Key Type and Key Status will then become applicable. You may decide whether or not to apply Key Status when "Normal Key" is selected for Key Type.

Key Type		Key Status
Scan Code	Up to 2 scan code values are allowed.	N/A
Normal Key	Up to 4 character strings are allowed.	▶ Add Shift ▶ Add Left Ctrl ▶ Add Left Alt ▶ Add Right Ctrl ▶ Add Right Alt Refer to Keyboard Wedge Table.

1. Read the barcode below to specify an additional field, one at a time.

Additional Field 1…
101584

Additional Field 2…
101585

Additional Field 3…
101586

Additional Field 4…
101587

Additional Field 5…
101588

2. Read the "Hexadecimal Value" barcode on page 184 for the desired additional field.

3. Read the "Validate" barcode to complete this setting.

Update

5.4.5 PAUSE FIELD SETTING

Pause Field Time

You can limit the pause time interval (1~16). By default, it is set to 1 second.

Pause Field Time
1~16 sec.
(*1)

1. Read the barcode above to specify the time interval for the Pause Field. (It is set to 1 by default.)

2. Read the "Decimal Value" barcode on page 183. For example, read "1" and "0" for setting the Pause Field Time to 10 seconds.

3. Read the "Validate" barcode on the same page to complete this setting.

End Programming Format

5.5 CONFIGURING FORMAT — DEFINE TRANSMISSION SEQUENCE

After configuring the data fields and additional fields, you must now program the transmission sequence of these fields that comprise the final data. This field transmission sequence can be assigned in any desired order and fields can be assigned multiple times as well.

Note: Up to twelve fields can be assigned.

1) Read the "Start" barcode to begin with programming the field transmission sequence.

Start Programming…

101589

2) Program the transmission sequence by reading the desired fields as well as additional fields.

||||| ||||| ||| ||| End Programming Format

5.6 PROGRAMMING EXAMPLES

5.6.1 EXAMPLE I

Extract data from the 10th character to the 19th character...

The editing format should be configured as follows:

1.   Read the "Enter Setup" barcode to enter the Configuration Mode.

2.   Read the "Configure Format 1" barcode.

3.   Read the "Clear All" and "Code 128" barcodes for applicable code type.

4.   Read the "Three Fields" barcode.

5.   Read the "Divide Field 1 by Length" barcode, and set length to 9.

   Field 1 data starts from the 1st character to the 9th character.

6.   Read the "Divide Field 2 by Length" barcode, and set length to 10.

   Field 2 data starts from the 10th character to the 19th character.

7.   Read the "Start (Programming)" barcode to program the transmission sequence.

8.   Read the "Field 2" barcode.

9.   Read the "End" barcode to complete the transmission sequence setting.

10.   Read the "End Programming Format" barcode to complete the setting of Editing Format 1.

11.   Read the "Enable Format 1" barcode to apply Editing Format 1 to Code 128.

12.   Read the "Update" barcode to exit the Configuration Mode.

Update

5.6.2 EXAMPLE II

Extract the date code, item number, and quantity information from barcodes.

Data in a barcode is encoded like this:

▶ From the 1st character to the 6th character is the date code.

▶ From the 7th character to the dash '-' character is the item number.

▶ After the dash '-' character is the quantity information.

Data will be transmitted like this:

▶ The item number goes first, then a TAB character, followed by the date code, then another TAB character, and finally the quantity information.

The editing format should be configured as follows:

1. Read the "Enter Setup" barcode to enter the Configuration Mode.

2. Read the "Configure Format 2" barcode.

3. Read the "Three Fields" barcode.

4. Read the "Divide Field 1 by Length" barcode, and set length to 6.

    Field 1 data starts from the 1st character to the 6th character.

5. Read the "Select Field Separator to Divide Field 2" barcode, and use a dash '-' character.

    Field 2 data starts from the 7th character until the dash '-' character is met.

6. Read the "Additional Field 1" barcode, and use a tab character for the field.

7. Read the "Start (Programming)" barcode to program the transmission sequence.

8. Read the "Field 2", "Additional Field 1", "Field 1", "Additional Field 1", "Field 3" barcodes.

9. Read the "End" barcode to complete the transmission sequence (F2 A1 F1 A1 F3) setting.

10. Read the "End Programming Format" barcode to complete the setting of Editing Format 1.

11. Read the "Enable Format 2" barcode to apply Editing Format 2 to all code types.

12. Read the "Update" barcode to exit the Configuration Mode.

End Programming Format

SPECIFICATIONS
Optical Characteristics	1500	1500WA	1500P	1502
Scan Engine	Non-contact type			
Optical Sensor	CCD, 2500 pixels			Laser
Light Source	Red LED 625nm		Red LED 618~626nm	Visible laser diode
Physical Characteristics				
Switch	Tactile switch			
Indication	Dual-color LED (Red/Green) and beeper			
Weight	Approx. 145 g		Approx. 149 g	Approx. 148 g
Power Adaptor

*With the Cable Auto-detection function disabled, USB HID Cable (307) and USB Virtual COM Cable also support 1500P. For further details, please refer to 1.14 Cable Auto-Detection.

Enter Setup

FIRMWARE UPGRADE

THROUGH RS-232 INTERFACE

1) Use the RS-232 or USB VCOM (308) cable between the scanner and the computer, and join the power supply cord.

2) Read the following barcodes in sequence for the scanner to enter the download mode.

   The scanner will respond with beeps to indicate it is ready for downloading.
   Enter Setup

   Download

   109997

3) Run the download utility "ProgLoad.exe" on your computer.

| Kernel Program	User Program
K1500_V*.shx	STD1500_V*.shx

▶ For the communication settings, select "RS-232" and the correct COM port.

▶ Select 115200 bps for the baud rate setting.

▶ For the file option, click [Browse] to select the target file for firmware update.

▶ Click [OK].

Note: The output interface will be reset to your previous settings, which may be Keyboard Wedge, RS-232 or Wand Emulation.

Update

THROUGH USB VIRTUAL COM INTERFACE (1500P ONLY)

1) Connect the USB cable between the scanner and the computer.

   ▸ If using USB Virtual COM for the first time, you must install its driver beforehand.

2) For Windows platform, read the following barcodes in sequence to configure the scanner to use USB VCOM_CDC as download interface.

Enter Setup

Activate Direct USB VCOM_CDC

100010

Update

109999

For non-Windows platform, read the following barcodes in sequence to configure the scanner to use USB Virtual COM as download interface.
Enter Setup
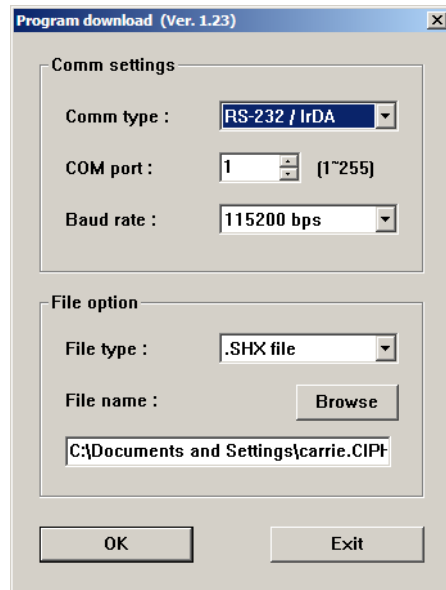

Activate Direct USB VCOM

100008

Update

109999

3) Read the following barcodes in sequence for the scanner to enter the download mode. The scanner will respond with beeps to indicate it is ready for downloading.

Enter Setup

Download

109997

4) Run the download utility "ProgLoad.exe" on the computer.

Enter Setup

Kernel Program	User Program
K1500_V*.shx	STD1500_V*.shx

Program download (Ver. 1.23)

Comm settings

Comm type :   RS-232 / IrDA

COM port :   1   (1~255)

Baud rate :   115200 bps

File option

File type :   .SHX file

File name :   Browse

C:\Documents and Settings\carrie.CIPH

OK   Exit

▶ For the communication settings, select "RS-232" and the correct COM port.

▶ Select 115200 bps for the baud rate setting.

▶ For the file option, click [Browse] to select the target file for firmware update.

▶ Click [OK].

5) After upgrading kernel, it will need to restart the scanner manually.

   After upgrading the user program, the scanner will automatically restart itself once the download is completed successfully.

Note: The output interface remains unchanged as specified in step 2 (= RS-232 or USB Virtual COM). For RS-232, the baud rate setting is still 115200 bps!
Update

HOST SERIAL COMMANDS

SERIAL COMMANDS

D

Purpose	To disable the scanner.
Remarks	"D"

E

Purpose	To enable the scanner.
Remarks	"E"

#@ nnnnnn <CR>

Purpose	To configure the scanner.
Remarks	nnnnnn – the six digits of command parameters.
	For example, "109952" is to list the current Code ID settings.

List Page 3

109952

Serial Command

"0x23" + "0x40" + "0x31" + "0x30" + "0x39" + "0x39" + "0x35" + "0x32" + "0x0d"

Note: After configuring the scanner, you may send the serial command "#@109999" to save the settings.

#@ - - - -<CR>

Purpose	To halt the scanner.
Remarks	"0x23" + "0x40" + "0x2d" + "0x2d" + "0x2d" + "0x2d" + "0x0d"

#@ . . . . <CR>

Purpose	To resume operation.
Remarks	"0x23" + "0x40" + "0x2e" + "0x2e" + "0x2e" + "0x2e" + "0x0d"

#@////<CR>

Purpose	To respond with a beep.
Remarks	"0x23" + "0x40" + "0x2f" + "0x2f" + "0x2f" + "0x2f" + "0x0d"

Update

#@TRIGOFF<CR>

Purpose	Disable software trigger
Remarks	"0x23" + "0x40" + "0x54" + "0x52" + "0x49" + "0x47" + "0x4f" + "0x46" + "0x46" + "0x0d"

#@TRIGON<CR>

Purpose	Enable software trigger
Remarks	"0x23" + "0x40" + "0x54" + "0x52" + "0x49" + "0x47" + "0x4f" + "0x4e" + "0x0d"

EXAMPLE

You may run HyperTerminal.exe on the host computer to send serial commands to the scanner via RS-232.

▶ For the scanner to stop immediately –

    D

▶ For the scanner to resume working –

    E

▶ For the scanner to change the beeper to medium volume and beep –

    #@101011<CR>

    #@////<CR>

▶ For the scanner to change the beeper to minimal volume and beep –

    #@101010<CR>

    #@////<CR>

▶ For the scanner to change the beeper frequency to 8 kHz (for Good Read Beep only) and beep –

    #@101001<CR>

    #@////<CR>

▶ For the scanner to change the beeper length to longest (for Good Read Beep only) and beep –

    #@101008<CR>

    #@////<CR>

▶ For the scanner to save the settings, send the serial command "#@109999" –

    #@101011<CR>

    #@109999<CR>

Note: You can configure more than one scanner connected to the host via RS-232. To identify the scanner, you may send the serial command to have it respond with a beep.

Enter Setup

Update

KEY TYPE & STATUS

KEY TYPE

If "Keyboard Wedge" is configured for interface, Key Type and Key Status will then become applicable.

*Normal

Scan Code

KEY STATUS

Decide whether or not to change key status when "Normal Key" is selected for Key Type.

Add Shift

Add Left Ctrl

Add Right Ctrl

Add Left Alt

Add Right Alt

Enter Setup

EXAMPLE

KEY TYPE = NORMAL

For example, if you want to program the character "!" as the prefix code:

1. Read the "Configure Prefix" barcode.

2. Read the "Hexadecimal Value" barcode on page 184 for "2" and "1".

3. Read the "Validate" barcode to complete this setting.

KEY TYPE = SCAN CODE

For example, if you want to program the character "a" (= "1C" on the scan code table) as the prefix code:

1. Read the "Configure Prefix" barcode.

2. Read the "Scan Code" barcode.

3. Read the "Hexadecimal Value" barcode on page 184 for "1" and "C".

4. Read the "Validate" barcode to complete this setting.

KEY TYPE = NORMAL + KEY STATUS = SHIFT

For example, if you want to program the character "!" (= "Shift" + "1" on keyboard) as the prefix code:

1. Read the "Configure Prefix" barcode.

2. Read the "Add Shift" barcode.

3. Read the "Hexadecimal Value" barcode on page 184 for "3" and "1".

4. Read the "Validate" barcode to complete this setting.

KEY TYPE = NORMAL + KEY STATUS = CTRL

For example, if you want to program "Ctrl+A" and "Ctrl+$" as the prefix code:

1. Read the "Configure Prefix" barcode.

2. Read the "Add Left Ctrl" barcode.

3. Read the "Hexadecimal Value" barcode on page 184 for "4", "1" (= "A").

4. Read the "Add Left Ctrl" barcode.

5. Read the "Hexadecimal Value" barcode on page 184 for "2", "4" (= "$").

6. Read the "Validate" barcode to complete this setting.
